MODULE DESCRIPTOR FORM

Module Information					
Module Title	Aircraft Engines I			Module Delivery	
Module Type	CORE			Theory Lab	
Module Code	AIE243				
ECTS Credits	6				
SWL (hr/sem)	150				
Module Level	2		Semester of Delivery	4	
Administering Department	Aircraft Engineering		College	Engineering	
Module Leader	Dr. Aws Akram Mahmood		e-mail	aws@uowa.edu.iq	
Module Leader's Acad. Title	Assist. Prof		Module Leader's Qualification	Ph.D.	
Module Tutor	None		e-mail	None	
Peer Reviewer Name			e-mail		
Review Committee Approval	01/01/2025		Version Number	2024	

Relation With Other Modules			
Prerequisite module	AIE233	Semester	3
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
Module Aims			

	<ol style="list-style-type: none"> 1. Knowledge of the basics concepts in constructing and modifying piston type aircraft engines. 2. Awareness of theoretical concepts dealing with the operating cycle analysis and improving performance. 3. Providing the knowledge in the engine testing under various conditions and identifying the evaluation parameters. 4. Understanding the concepts of engagement between the normal engines with supercharging aiming higher outputs. 5. Providing the knowledge of the different types of compressors encountered in turbocharged piston type aircraft engines.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Applying the concepts of thermodynamic cycles according to the second law of thermodynamics. 2. Achieving the principle of energy conservation and the thermal balance for different aircraft engines involving piston type. 3. Complete awareness of the determination techniques of each kind of piston engines using basic formulation with testing procedures. 4. Applying the first and second law concepts to the thermodynamic processes associated with the combustion systems in piston type engines. 5. Exploitation of the acquired knowledge in turbocharged engines including description and cycle analysis of various kinds of compressors involved.
Indicative Contents	<p>Indicative content includes the following.</p> <ul style="list-style-type: none"> • Applying the governing laws in cycle analysis of piston type aircrafts. Realizing thermodynamics processes and subject it to energy production procedures. [13 hrs] • Using the basic concepts of evaluation procedures on piston engines to formulate the tests conducted and providing the design parameters and selection procedure. [13 hrs] • Using the air-standard cycles to approximate the actual internal combustion aircraft engines and driving the evaluation approach related to them. [13 hrs] • Formulation for heat and work transfer in thermodynamic Fuel-Air cycles and deriving the performance characteristics. [13 hrs] • The engineering application of thermodynamics and fluid dynamics in various processes in work and heat exchange in piston type engines. [13 hrs] • Applying the operational concepts of supercharging on the cycle analysis of piston type aircraft engines. [11 hrs] • Providing the essential knowledge in design and operating various kinds of compressors used in turbocharged aircraft engines. [11 hrs]

Learning and Teaching Strategies

Strategies	<ol style="list-style-type: none"> 1. Class active discussions during comprehensive presentations. 2. Home works and technical reports related to the explored course items. 3. Quizzes and prepared exams to motivate student's realization. 4. Organization of semester examinations. 5. Laboratory oral discussions.
-------------------	--

Student Workload (SWL)

Structured SWL (h/sem) الحمل الدراسي المنتظم للطالب خلال الفصل	63	Structured SWL (h/w) الحمل الدراسي المنتظم للطالب أسبوعياً	4
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطالب خلال الفصل	87	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطالب أسبوعياً	5.8
Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	150		

Module Evaluation

		Time/ Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	4	20% (20)	3, 6, 9, 12	All
	Assignments	2	10% (10)	5, 10	All
	Projects / Lab. Report	Lab. 4 -	10% (10) -	Continuous -	All -
Summative assessment	Midterm Exam	2 hrs	10% (10)	7	All
	Final Exam	3 hrs	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Introduction to the piston type aircraft engines
Week 2	Two and four stroke operation cycles in reciprocating internal combustion engines.
Week 3	Description of Otto standard cycles, and actual cycle spark ignition engine.
Week 4	Deviation in operational characteristics between ideal and actual cycles.

Week 5	Basic parameters involved in testing piston type aircraft engines.
Week 6	Energy balance and performance evaluation of piston type engines.
Week 7	Constant speed and variable speed test procedures
Week 8	Fuels used in aircraft engines along with combustion theory.
Week 9	Calculation formulae of the heat of combustion of fuels.
Week 10	Combustion process involved in piston type aircraft engines, exhaust gas analysis.
Week 11	Concept of supercharging applied to piston type aircraft engines.
Week 12	Turbocharging theory and analysis.
Week 13	Methods and limitations applied to the turbocharged piston type aircraft engines.
Week 14	Roots blower and its indicator diagram, cycle analysis of Roots blower.
Week 15	Vane type compressor and its indicator diagram, cycle analysis of vane type compressor.
Week 16	Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Study parts of the different engine types & determination of valve timing diagram.
Week 2	Exp. 2: Diesel engine test at constant speed
Week 3	Exp. 3: Diesel engine test at variable speed
Week 4	Exp. 4: Petrol engine test at constant speed
Week 5	Exp. 5: Petrol engine test at variable speed
Week 6	Exp. 6:
Week 7	Exp. 7:

Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. This course teaches the student how to apply fundamental procedural programming concepts to the programming language C++. Programming principles and constructs, such as data types, common control flow structures, basic data structures, and console input/output will be explained. 2. To provide sufficient knowledge of programming Language C++ to write straightforward programs. 3. The development of the student's ability to apply the knowledge in order to be able to correct analysis of the question and thus put the appropriate assumptions and interpretation to reach a solution. Through textbooks and lectures, in addition to the (programming I) Laboratory experiments. 4. Knowledge and Understanding <ul style="list-style-type: none"> • Use a special programming language C++ compiler with the issuance of a modern software solves all the complex questions. • Solution of different equations and problems using C++ language. • Model Description Terms of solution for each and every way mathematical operation. 1. To develop the student to have specific skills <ul style="list-style-type: none"> • Logical thinking when solving problems • The use of mathematical equations. • Determine the appropriate method of solution. • Explain ways to enter matrices and vectors
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Enable the student to learn and understand the basic of: <ul style="list-style-type: none"> • Evolution of Computers, Generation of Computers, Super Computers, Mainframe Computers, Personal Computers (Different Types)) • Classification of Computers Analog Digital and Hybrid Computers, Classification of Computers according to size • Characteristics of Computers, Block Diagram of a Digital Computer. 2. The student should Know the general information of Operating systems (OS), Types of OS, and the other subjects as it sequenced by the Course Materials and Schedule. 3. Understanding the Programming Concepts, such as: <ul style="list-style-type: none"> • Global concept in any programming languages.

	<ul style="list-style-type: none"> • Structured Programming. • Algorithms and Flowcharts with Examples <ol style="list-style-type: none"> 4. The ability to make and build programs in different ME applications. 5. Enable the student to learn the Variables, Data Types, Arithmetic operators, Assignment operators, Comparison operators, Logical operators. 6. The student should understand and be able to relate Basic Input / Output, Control Structures, and Functions.
Indicative Contents	<p>Indicative content includes the following.</p> <p><u>Introduction to Computers I+ II (History)</u> Evolution of Computers, Generation of Computers, Super Computers, Mainframe Computers, Personal Computers (Different Types)), Classification of Computers Analog Digital and Hybrid Computers, Classification of Computers according to size, Characteristics of Computers, Block Diagram of a Digital Computer, Operating systems (OS), Types of OS, Dos and Windows operating systems. [3 hrs]</p> <p><u>Introduction to Programming Concepts I,</u> Global concept in any programming languages, Structured Programming Algorithms and Flowcharts with Examples. [3 hrs]</p> <p><u>Introduction for C++ programming language</u> Instructions for using (Dev) software, Basics of C++, Program Structure. [3 hrs]</p> <p><u>Variables, Data Types</u> int • double • float • string • bool • Constants • , Arithmetic operators Assignment operators, Comparison operators, Logical operators. [4 hrs]</p> <p><u>Basic Input / Output</u> Course input cin>>, Course output cout<< [4 hrs]</p> <p><u>Control Structures</u> if statement, if...else Statement, if...else if...else Statement, switch Statement Iteration structures (loops), For loop, While Loop [5 hrs]</p> <p><u>Functions (I)+ (II) [5 hrs]</u></p>
Learning and Teaching Strategies	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time

	refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To develop problem solving skills and understanding of circuit theory through the application of techniques. 2. To understand how voltage, current and power from a given circuit. 3. This course deals with the basic concept of electrical circuits. 4. This is the basic subject for all electrical and electronic circuits subject. 5. To understand Kirchhoff's current and voltage Laws problems. 6. To perform mesh and Nodal analysis.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Recognize how electricity works in electrical circuits. 2. List the various terms associated with electrical circuits. 3. Summarize what is meant by a basic electric circuit. 4. Discuss the reaction and involvement of atoms in electric circuits. 5. Describe electrical power, charge, and current. 6. Define Ohm's law. 7. Identify the basic circuit elements and their applications. 8. Discuss the operations of sinusoid and phasors in an electric circuit. 9. Discuss the various properties of resistors, capacitors, and inductors. 10. Explain the two Kirchhoff's laws used in circuit analysis. 11. Identify the capacitor and inductor phasor relationship with respect to voltage and current.
Indicative Contents	<p>Indicative content includes the following.</p> <p><u>Part A - Circuit Theory</u></p> <p>DC circuits – Current and voltage definitions, Passive sign convention and circuit elements, Combining.</p> <p>resistive elements in series and parallel. Kirchhoff's laws and Ohm's law. Anatomy of a circuit, Network reduction, Introduction to mesh and nodal analysis . [8hrs]</p> <p>AC circuits I – Time dependent signals, average and RMS values. Capacitance and inductance, energy storage elements, simple AC steady-state sinusoidal analysis. [8 hrs]</p> <p>AC Circuits II - Phasor diagrams, definition of complex impedance, AC circuit analysis with complex numbers. [6 hrs]</p>

	<p>RL, RC and RLC circuits - Frequency response of RLC circuits, simple filter and band-pass circuits, resonance and Q-factor, use of Bode plots, use of differential equations and their solutions. Time response (natural and step responses). Introduction to second order circuits. [8 hrs]</p> <p>Revision problem classes [3 hrs]</p> <p><u>Part B - Analogue Electronics</u></p> <p>Fundamentals</p> <p>Resistive networks, voltage and current sources, Thevenin and Norton equivalent circuits, current and voltage division, input resistance, output resistance, coupling and decoupling capacitors, maximum power transfer, RMS and power dissipation, current limiting and over voltage protection. [8 hrs]</p> <p>Components and active devices – Components vs elements and circuit modeling, real and ideal elements. Introduction to sensors and actuators, self-generating vs modulating type sensors, simple circuit interfacing. [3 hrs]</p> <p>Diodes and Diode circuits – Diode characteristics and equations, ideal vs real. Signal conditioning, clamping and clipping, rectification and peak detection, photodiodes, LEDs, Zener diodes, voltage stabilisation, voltage reference, power supplies. [8 hrs]</p>
Learning and Teaching Strategies	
Strategies	<p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p>

Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Introduction to DC Circuits: Voltage, Current and Resistance. Ohm's Law. Kirchhoff's Laws. Voltage divider rule. Current divider rule. Current and Voltage Sources.
Week 2	Sources conversion. Series and Parallel Circuits. Star-delta and delta-star conversion. Methods of Analysis and Network Theorems: Branch-Current Analysis.
Week 3	Mesh Analysis. Nodal Analysis. Superposition Theorem. Thévenin's Theorem. Norton's Theorem.
Week 4	Maximum Power Transfer. Capacitors and Inductors: Capacitance and Capacitors
Week 5	Inductor and Inductance. Sinusoidal Alternating Waveforms:

	AC Voltage or Current Waveform General Format.
Week 6	Sinusoidal Waveform Format (period, Frequency, peak value and Phase Relations). Average Value and Effective (rms) Values. The Basic Elements (R, L, and C) response to a sinusoidal voltage or current.
Week 7	Magnetic Circuits: Magnetic Field, Flux and flux density. Reluctance and Magnetizing Force.
Week 8	Ohm's Law for Magnetic Circuits. Ampère's Circuital Law.
Week 9	AC Circuits Analysis: Series and Parallel AC Circuits. Power calculation (P, Q, and S).
Week 10	Power Triangle. Power-Factor. Polyphase Systems:
Week 11	Three-phase voltage generation. Generator-Loads connection in three phase systems (Y-Y, Δ - Δ , Y- Δ , Δ -Y). Phase and line voltage and current conversion between Y and Δ .
Week 12	Rotating Machines Principles: Elementary concepts of rotating machines. Direct –current machines. Synchronous machines.
Week 13	Induction machine. Stepper motor. Transformers: Construction and Working principle of transformer.
Week 14	E.M.F. equation of transformer. Voltage transformation ratio. Types of Transformers and Application
Week 15	Power Electronic Circuits: Power electronic elements (diodes, switching transistors , Capacitors and Inductor). Power electronic circuits (Rectifiers, inverters, converters).
Week 16	Preparatory week before the Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Ohm's Law
Week 2	Exp. 2: Kirchhoff's Laws
Week 3	Exp. 3: Star-Delta and Delta-Star Circuit conversions
Week 4	Exp. 4: Superposition Theorem
Week 5	Exp. 5: Impedance Elements Characteristics

Week 6	Exp. 6: RLC Series Circuit
Week 7	Exp. 7:

MODULE DESCRIPTOR FORM

Module Information					
Module Title	Eng. Drawing and Descriptive Geometry			Module Delivery	
Module Type	CORE			Theory Lab Practical	
Module Code	ENG124				
ECTS Credits	7				
SWL (hr/sem)	175				
Module Level	1		Semester of Delivery	2	
Administering Department	Aircraft Engineering		College	Engineering	
Module Leader	Ahmad Saddy Mohamad		e-mail	ahmad.saddy@uowa.edu.iq	
Module Leader's Acad. Title	Assist. Prof		Module Leader's Qualification	PhD.	
Module Tutor			e-mail		
Peer Reviewer Name			e-mail		
Review Committee Approval			Version Number		

Relation With Other Modules			
Prerequisite module	None		Semester
Co-requisites module	None		Semester
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. Training the student in the first stage the usage of Eng. drawing equipment. 2. Educate the student in the first stage the fundamental of mechanical drawing like Lettering, Applied geometry Pictorial drawing (Real model in true dimension), Orthographic projection, first & third angle projection, Dimensions, Sections, Third view estimate.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Identify the components and basics of Engineering drawing. 2. Learn how to read the maps of mechanical engineering drawing. 3. Identify and knowing of all symbols and standers of Engineering drawing. 4. Identify the methods of engineering drawing and applied geometry. 5. Learn how to Pictorial drawing (Real model in true dimension) and Orthographic projection. 6. Identify all types of projection, First and third angle projection and Sections 7. The possibility of the student to draw the subject which explains to him. 8. Linking what his learning with reality. 9. Complete the drawing in specified time. 10. Student ability to learn and understand all the private belongings of mechanical drawing. 11. Develops student ability to using computers programs of drawing and conjugated with manual drawing.
Indicative Contents	<p>**Engineering drawing: Introduction. Standard drawing equipment.</p> <p>Lettering: Lines kinds in drawing. Kufi font in the writing of letters and numbers. The paper types and design with title table. Draw lines and circles. [10 hrs]</p> <p>**Descriptive Geometry: Introduction to descriptive geometry. Projection theory with standard planes. Methods of projection. Projection of a point. Exercise in projection of a point. [5 hrs]</p> <p>Introduction to CAD Packages [4.5 hrs] <ol style="list-style-type: none"> 1- Menus/ format/ Draw / Tools / Dimension / Modify 2- Tool bars 3-Drawing area 4-Command bar / Task bar 5-Drawing Grid / Snap Mode / Ortho Mode / Object Snap and Tutorials </p> <p>**Engineering drawing: Engineering Processes:</p>

Applied geometry in eng. drawing. Exercise in important eng. geometry (Drawing a perpendicular line to bisector, dividing a line, drawing a tangent to circle from point, Drawing an ellipse). [5 hrs]

Introduction to (ISO); Pictorial drawing:

Real model in true dimensions. Draw cube shape with ovals by used four centers method. Exercise in pictorial drawing. [7 hrs]

****Descriptive Geometry:**

Projection of straight line. Exercise in projection of straight line. Exercise in projection of straight line by rotation method. The status of the straight line in space. [2 hrs]

**** CAD [5.5 hrs]**

Coordinate system (absolute and relative coordinate)

Cartesian / Polar Coordinates and Tutorials

Two Dimensional Drawing (Line , Circle , Rectangle , Arc , Polygon)

Modify (Erase , Copy , Rotate , Mirror , Offset) and Tutorials

****Engineering drawing:**

Exercises in Engineering Drawing (ISO).

Three Projections:

Three projections definition (front, top and side view). Draw in first angle.

Exercises in projection. [14.5 hrs]

****Descriptive Geometry:**

Projection of straight line. Exercise in projection of straight line. Exercise in projection of straight line by rotation method. The status of the straight line in space. [1.5 hrs]

**** CAD [3.5 hrs]**

Two Dimensional Drawing (Polyline , Helix , Donut , Ellipse)

Modify (Trim , Join , Chamfer , Fillet) and Tutorials

****Engineering drawing:**

Dimensioning:

Main rules in dimensions position and details in drawing. Rules in dimensions position for arcs and circles. Exercise in applied dimensions on projection view. [6 hrs]

Sections

Sections definition. Find sections and section planes and half section projection. Exercise in half section projection. [8 hrs]

****Descriptive Geometry:**

	<p>Definition and Description of the Auxiliary planes. Exercise in auxiliary planes. [3 hrs].</p> <p>**CAD [2.5 hrs] Draw Hatch / Line type / Line width / Color and Tutorials Array (Rectangular and Polar) and Tutorials</p> <p>**Engineering drawing: Third view estimate: Important steps to estimate third unknown projection depending on the known two projections. Exercise in estimate third unknown projection. [15 hrs]</p> <p>**Descriptive Geometry: Development of surface: Introduction and describe development of surface. Exercise in projection triangular shape. Exercise in projection quadrilateral shape by rotation method. [2 hrs]</p> <p>**CAD [2 hrs] Dimensions and Tutorials</p>
Learning and Teaching Strategies	
Strategies	<p>-Give the student theoretical lectures prepared by the lecture and explain the subject of drawing in details and draw it in front of the students.</p> <p>-Get some samples of the subject of drawing to the class to conform the understanding and to know how it works.</p> <p>-Discuss some student's mistakes and how to avoid them</p>

Student Workload (SWL)

Structured SWL (h/sem)	78	Structured SWL (h/w)	5
Unstructured SWL (h/sem)	97	Unstructured SWL (h/w)	6.5
Total SWL (h/sem)	175		

Module Evaluation

	Time/ Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Quizzes	2	10% (10)	5, 10	LO # 1-11

Formative assessment	Assignments	15	15% (15)	Continuous	LO # 1-11
	Projects / Lab.	Lab. 5	10% (10)	Continuous	LO # 1-11
	Report	5	5% (5)	Continuous	LO # 1-11
Summative assessment	Midterm Exam	2 hrs.	10% (10)	8	LO # 1-11
	Final Exam	3 hrs.	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered :
Week 1	**Engineering drawing: Introduction. Standard drawing equipment. **Descriptive Geometry: Introduction to descriptive geometry.
Week 2	**Engineering drawing: Lettering: Lines kinds in drawing. Kufi font in the writing of letters and numbers. The paper types and design with title table. **Descriptive Geometry: Projection theory with standard planes.
Week 3	**Engineering drawing: Draw lines and circles. **Descriptive Geometry: Methods of projection. Projection of a point. Exercise in projection of a point.
Week 4	**Engineering drawing: Engineering Processes: Applied geometry in eng. drawing. Exercise in important eng. geometry (Drawing a perpendicular line to bisector, Dividing a line, Drawing a tangent to circle from point, Drawing an ellipse). **Descriptive Geometry: Projection of straight line. Exercise in projection of straight line.
Week 5	**Engineering drawing: Introduction to (ISO); Pictorial drawing: Real model in true dimensions. Draw cube shape with ovals by used four centers method. **Descriptive Geometry: Exercise in projection of straight line by rotation method.

Week 6	<p>**Engineering drawing: Exercise in pictorial drawing.</p> <p>**Descriptive Geometry: The status of the straight line in space.</p>
Week 7	<p>**Engineering drawing: Exercises in Engineering Drawing (ISO).</p>
Week 8	<p>**Engineering drawing: Three Projections: Three projections definition (front, top and side view).</p>
Week 9	<p>**Engineering drawing: Draw in first angle. Exercises in projection.</p>
Week 10	<p>**Engineering drawing: Dimensioning: Main rules in dimensions position and details in drawing. Rules in dimensions position for arcs and circles. Exercise in applied dimensions on projection view.</p> <p>**Descriptive Geometry: Definition and Description of the Auxiliary planes. Exercise in auxiliary planes.</p>
Week 11	<p>**Engineering drawing: Sections Sections definition. Find sections and section planes and half section projection.</p> <p>**Descriptive Geometry: Exercise in auxiliary planes.</p>
Week 12	<p>**Engineering drawing: Exercise in half section projection.</p>
Week 13	<p>**Engineering drawing: Third view estimate: (Part 1) Important steps to estimate third unknown projection depending on the known two projections.</p> <p>**Descriptive Geometry: Development of surface: Introduction and describe development of surface. Exercise in projection quadrilateral shape by rotation method.</p>
Week 14	<p>**Engineering drawing: (Part 2) Important steps to estimate third unknown projection depending on the known two projections.</p> <p>**Descriptive Geometry: Exercise in projection triangular shape.</p>

Week 15	**Engineering drawing: Exercise in estimate third unknown projection. **Descriptive Geometry: Exercise in projection quadrilateral shape by rotation method.
Week 16	Preparatory week before the Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Introduction to CAD packages 1- Menus/ format/ Draw / Tools / Dimension / Modify 2- Tool bars
Week 2	Drawing area 1- Command bar / Task bar 2- Drawing Grid / Snap Mode / Ortho Mode / Object Snap and Tutorials
Week 3	Coordinate system 1- Absolute and relative Coordinate 2- Cartesian and Polar coordinates
Week 4	Two dimensional drawing 1- (Line , Circle , Rectangle , Arc , Polygon) 2- Modify (Erase , Copy , Rotate , Mirror , Offset) and Tutorials
Week 5	1 -Two Dimensional Drawing (Polyline , Helix , Donut , Ellipse) 2- Modify (Trim , Join , Chamfer , Fillet) and Tutorials
Week 6	1- Draw Hatch / Line type / Line width / Color and Tutorials 2- Array (Rectangular and Polar) and Tutorials
Week 7	Dimensions and Tutorials

Learning and Teaching Resources

	Text	Available in the Library?
Required Texts	1- K. Venkata Reddy, "Text book of Engineering Drawing", BS Publications, 2008. 2- كتاب الرسم الهندسي , عبد الرسول الخفاف , 1986 3- الهندسة الوصفية ، د. يوسف نيقولا ،	Yes

MODULE DESCRIPTOR FORM

Module Information					
Module Title	Engineering and Numerical Analysis			Module Delivery	
Module Type	CORE			Theory Lab	
Module Code	AIE241				
ECTS Credits	6				
SWL (hr/sem)	150				
Module Level		2	Semester of Delivery		4
Administering Department		Aircraft Engineering	College	Engineering	
Module Leader	Dr. Mohammed Wahab		e-mail	Dr.mohamma.wahab@uokerbala.edu.iq	
Module Leader's Acad. Title		Professor	Module Leader's Qualification		Ph.D.
Module Tutor	None		e-mail	None	
Peer Reviewer Name			e-mail		
Review Committee Approval		01/01/2025	Version Number	2024	

Relation With Other Modules			
Prerequisite module	AIE231	Semester	3
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To provide a course of high academic quality in Engineering and Numerical Analysis in a challenging and supportive learning environment that encourages students to reach their full potential, personally and academically. 2. To provide a course that is suitable both for students aiming to pursue research and for students going into other careers. 3. To provide an integrated system of teaching which can be tailored to the needs of individual students. 4. To develop in students the capacity for learning and clear logical thinking. 5. To continue to attract and select students of outstanding quality. 6. To provide an intellectually stimulating environment in which students have the opportunity to develop their skills and enthusiasm to their full potential.
Module Learning Outcomes	<p>Knowledge and Understanding: This Course will develop learners' ability to:</p> <ol style="list-style-type: none"> 1. Understand and use the relationships to define the principle of Engineering and Numerical analysis 2. Select and apply operational skills in algebra, geometry, and trigonometry within mathematical contexts 3. Select and apply skills in solving the non-linear and linear equations. 4. Use numerical models 5. Use engineering analysis reasoning skills to interpret information, select a strategy to solve a problem, and communicate solutions. 6. To apply the numerical analysis on the data tables, which are obtained from experimental work. <p>Subject-specific skills: It is expected that learners will develop the following:</p> <ol style="list-style-type: none"> 7. Broad, generic skills through this Course. 8. Skills for Learning, and drawn from the main skills areas listed below. 9. Skills for Life 10. and Skills for Work <p>These must be built into the Course where there are appropriate opportunities.</p>
Indicative Contents	<p>Indicative content includes the following.</p> <p>Engineering Analysis</p> <p>Laplace Transformations:</p>

	<p>Introduction. Definition of L.T., Definition of I.L.T. Examples. [8hrs]</p> <p>Solution of differential equations using L.T:</p> <p>Method of solution. Using L.T. for solving practical problems. [5hrs]</p> <p>Solution of 2nd order D.E. using power series method:</p> <p>Solution near the ordinary point. Solution near the singular point. [5hrs]</p> <p>Solution of partial D.E:</p> <p>Definition. Solution methods of P.D.E. Examples. [5hrs]</p> <p>Using of separation method:</p> <p>Definition of separation method. Examples. [5hrs]</p> <p>Applications of the solution of P.D.E:</p> <p>Solution of unsteady one-dimensional heat equation. Solution of vibrating string. [5hrs]</p> <p>Numerical Analysis</p> <p>Solution of non-linear equations:</p> <p>Simple iteration method, Examples. Newton –Raphson method, Derivation, Square Roots, Reciprocal of any number. [5hrs]</p> <p>Solution of simultaneously linear equations:</p> <p>Definition and Methods of Solution. Direct methods: Gauss- Elimination, Gauss -Jordan Elimination. Indirect methods: Jacob's method. Gauss- Seidle method. [5hrs]</p> <p>Numerical interpolation:</p> <p>Linear interpolation. Quadratic interpolation. [5hrs]</p> <p>Newton and Lagrange forms:</p> <p>Using this method for equal segment and unequal segments. [5hrs]</p> <p>Numerical differentiation</p> <p>First derivative. Second derivative. [5hrs]</p> <p>Numerical Integration</p> <p>trapezoidal rule, Simpson Rule (1/3). Simpson Rule (3/8). [5hrs]</p> <p>Curve fitting</p> <p>linear Regression. Applications of linear regression. Polynomial curve fitting. [4hrs]</p> <p>Solution of ordinary differential equations O.D.E.</p> <p>Taylor series method. Simple Euler method. Runge-kutta method. [5hrs]</p>
Learning and Teaching Strategies	
Strategies	<p>All lectures reflect the higher values, purposes and principles. They offer flexibility, provide more time for learning, focus on skills and applying to learn, and scope for personalization and choice.</p> <p>In this Course, and its component Units, there will be an emphasis on skills development and the application of those skills. Assessment approaches will be proportionate, fit for purpose and will promote best practices, enabling learners to achieve the highest standards they can.</p> <p>This course provides learners with opportunities to continue to acquire and develop the attributes and capabilities of the four capacities, as well as skills for learning, skills for life and skills for work.</p>

Delivery Plan (Weekly Syllabus)

Week	Material Covered
Week 1	Laplace Transformations (L.T): Introduction. Definition of L.T. Examples.
Week 2	Inverse Laplace Transformations (I.L.T.): Introduction. Definition of I.L.T. Examples.
Week 3	Solution of differential equations using L.T: Method of solution. Using L.T. for solving practical problems Examples.
Week 4	Solution of 2nd order D.E. using power series method: Introduction. Solution near the ordinary point. Solution near the singular point.
Week 5	Solution of partial D.E: Definition. Solution methods of P.D.E.

	Examples.
Week 6	Using of separation method: Definition of separation method. Examples.
Week 7	Applications of the solution of P.D.E: Solution of unsteady one-dimensional heat equation. Solution of vibrating string.
Week 8	Solution of non- linear equations: Introduction Simple iteration method, Examples. Newton –Raphson method, Derivation, Square Roots, Reciprocal of any number. Applications.
Week 9	Solution of simultaneously linear equations: Definition and Methods of solution. Direct methods: Gauss- Elimination, Gauss -Jordan Elimination. Indirect methods: Jacob's method. Gauss- Seidle method.
Week 10	Numerical interpolation: Linear interpolation. Quadratic interpolation.
Week 11	Newton and Lagrange forms: Using this method for equal segment and unequal segments
Week 12	Numerical differentiation First derivative Second derivative
Week 13	Numerical Integration Trapezoidal rule Simpson Rule (1/3) Simpson Rule(3/8)
Week 14	Curve fitting Linear Regression Applications of linear regression Polynomial curve fitting
Week 15	Solution of ordinary differential equations O.D.E. Taylor series method Simple Euler method Runge-kutta method
Week 16	Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Solution of non-linear equations by using MATLAB program (Simple iteration method and Newton –Raphson method)

Week 2	Exp. 2: Solution of linear equations by using MATLAB program (Gauss- Elimination and Gauss- Seidle method)
Week 3	Exp. 3: Newton forwards interpolation method for equal segment by using MATLAB program
Week 4	Exp. 4: Solution of Numerical Integration (Simpson Rule (1/3)) by using MATLAB program.
Week 5	Exp. 5: Solution of ordinary differential equations O.D.E. by using MATLAB program (Runge-kutta method).

Relation With Other Modules			
Prerequisite module	ENG113	Semester	1
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To assist students to understand the fundamental principles of engineering mechanics (Statics and Dynamics). 2. To develop problem solving skills and understanding of principles of Dynamics Kinematics of rigid bodies: through the application of techniques as they relate to the different fields of engineering. 3. To develop problem solving skills and understanding of Newton's law through the application of techniques. 4. To understand how analysis of Structures, Trusses, Frames, Machines, Centers of Mass and Centroids, and Area Moments of Inertia. 5. To comprehend how clarification of Mass Moments of Inertia and analysis in two dimensions' problems. 6. To understand the motion of bodies (kinematics), and the other subjects as it sequenced.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Enable the student to learn and understand the basic Engineering Mechanics concepts, mass, forces, quantities and vectors at Mechanical Engineering 2. The student should understand and be able to apply Newton's Laws. 3. The student should Know the analysis of Structures, Trusses, Frames, Machines. 4. The student should be able to find the Centers of Mass and Centroids. 5. The student should know how can we find the Area Moments of Inertia, and the other subjects as it sequenced by the Course Materials and Schedule. 6. Understanding the basic principles of particles and solid body's motion 7. The ability to make a mathematical model of the motion of the mechanical systems. 8. Calculating the motion resulting from applying forces and moments, as well as calculating the forces and moments to describe the characteristics of motion. 9. The student should understand and be able to relate the kinematics of bodies to the solution of dynamics problems in impulse and momentum of particles. 10. The student should understand and be able to study the Absolute and relative acceleration 11. The student should understand and be able to apply Newton's Laws to particles to solve problems related to work and energy of

	particles.
Indicative Contents	<p>Indicative content includes the following.</p> <p>Part A - Statics Structures: Plane Trusses, Method of Joints, Method of Sections, and Frames and Machines [9 hrs].</p> <p>Centers of Mass and Centroids: Centroids of Lines, Centroids of Areas, Centroids of Volumes, and Composite Bodies and Figures [9 hrs].</p> <p>Area Moments of Inertia: Rectangular Moments of Inertia, Polar Moments of Inertia, Composite Areas, Products of Inertia, and Rotation of Axes [5 hrs].</p> <p>Part B - Dynamics</p> <p>Work and energy of particles: Work of a force, Kinetic energy of a particle, Principle of work and energy, and Potential energy [8 hrs].</p> <p>Impulse and momentum of particles: Rate of changed of angular momentum. Conservation of angular momentum, Rate of changed of angular momentum. Conservation of angular momentum [8 hrs].</p> <p>Impact: Central impact, Oblique Impact [8 hrs].</p> <p>Kinematics of rigid bodies: Translation and Rotation of rigid bodies, General motion. Absolute and relative velocity in plane motion, Instantaneous center of rotation, and Absolute and relative acceleration [12 hrs].</p> <p>Mass Moments of Inertia: Rectangular Mass Moments of Inertia, Polar Mass Moments of Inertia, and Composite Masses [8 hrs].</p>
Learning and Teaching Strategies	
Strategies	<p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting</p>

to the students.

Prerequisite module	ENG107	Semester	2
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<p>In the realm of communication today, English plays a unique and important function. It has a distinct character in the realm of education as well. For an English instructor, teaching English is a very desirable job. It is necessary for the instructor to ascertain his or her goals and objectives prior to beginning instruction.</p> <p>The objective of the present module is to improve the communication skills of students whose proficiency in English is at the pre-intermediate level. In order to help students communicate effectively on a variety of themes, there will be a special emphasis on strengthening each of the four language skills—speaking, listening, reading, and writing—as well as expanding their vocabulary and syntactical repertoire.</p>
Module Learning Outcomes	<p>Students will benefit from the current semester by increasing their understanding of the subject matter, which will allow them to comprehend sentences and paragraphs and use grammar correctly as well as analyze language elements and determine the proper relationships between them.</p> <p>Thus, the following will be the learning objectives:</p> <ol style="list-style-type: none"> 1. The class addresses the fundamental language and communication skills students require for success in technical areas of specialization; 2. Students will be able to express their viewpoints and take part in debates on a wide variety of current subject matters; 3. efficiently convey ideas in writing on a variety of modern subjects, particularly technological ones, 4. quickly and easily comprehend the main ideas of a variety of somewhat complicated written and spoken sources. 5. interact with others in a multicultural group with effectiveness, 6. using an array of digital tools and gadgets to organize, decipher, and generate meaning
Indicative Contents	<p><u>Part A - Competencies in communication</u></p> <p><u>Listening:</u> Within the parameters of the curriculum, comprehend and list the essential ideas of conversations ranging from 250 to 300 words that cover well-known subjects that are frequently encountered in life, in the workplace, in educational institutions, etc. - Pay attention to well-known monologues and discussions in daily life and infer meanings from the speakers' facial expressions and emotions. - Recognize the essential ideas presented in plain language or with the use of illustrative graphics in news broadcasts, interviews, etc. on well-known subjects. [3 Hours]</p> <p><u>Speaking:</u> Deliver brief discussions with reasonable accuracy and clarity. - Discuss and engage with other speakers on subjects you are acquainted with, share your personal opinions, and exchange knowledge about the subjects taught in the curriculum. Explain well-known subjects in plain language and tell</p>

	<p>a little tale that is directly relevant to the subjects discussed. - Prepare and deliver the projects on the subjects covered in the curriculum. [2 Hours]</p> <p><u>Reading:</u> Read and understand the major ideas and particular contents of a 250-word passage on themes that are relevant and well-known. - Read and comprehend the writings' argumentative flow; use plain language to identify the texts' primary conclusions. - Use the phrases and structures from the original texts to locate and summarize brief documents that are commonly used, such as basic letters and posters. [2 Hours]</p> <p><u>Writing:</u></p> <ul style="list-style-type: none"> - compose paragraphs using block and indented styles. Write 200-250 word simple, logical writings; create brief reports based on recommendations, supporting the recommendations with facts and reasoning; compile brief material from numerous resources and summarize it. - Fill out (write/fill in) administrative forms, including emails, job application letters, resumes, and CVs. - Create evocative descriptions for basic tables and charts. [2 Hours] <p><u>Part B- Linguistic knowledge</u></p> <p>Pronunciation: utterances with distinct syllables, vowel and consonant sounds, Special instances of stressed words: stressed words, Assimilation, sentence stress, and vowel connecting Inquiry, tone, homophones, vocabulary drills, and terminology, phrases, and sentences pertaining to the major of the pupils. [3 hrs]</p> <p>Vocabulary: this part includes terms with various meanings and pronunciations, collocations, and words linked to the course's themes and subjects, also it entails using a bilingual dictionary and knowing strategies to develop and record vocabulary. [2 hrs].</p> <p>Grammar:</p> <p>Tenses- Present time tenses, Parts of speech (Nouns-Verbs-Adjectives-Adverbs), Tenses- Past Time Tenses, Parts of speech (Prepositions-Articles-Pronouns-Conjunctions-Interjections), Tenses- Future time tenses, sentence pattern (nine patterns), Irregular verbs, Passive and Active voice in scientific writing, Conditionals, verbs and nouns go together and verbs used in academic writing, Language Function (requests-suggestions, offers...etc.), Modal and semi modal verbs, Idioms and Idiomatic Expressions, Phrasal verbs, collocations, Comparative and Superlative. (3 hrs)</p>
Learning and Teaching Strategies	
Strategies	There should be some preparation from the instructor for the students to listen to and study academic texts (spoken and written). Together with it, students should

use their speaking, writing, reading, and listening skills to engage in the lecture, it is preferable here to create a student-centered class.

Student-Centered class and Communicative Language Teaching (CLT), which encourages learners to speak and communicate the target language with one another, are used to instruct students.

It is imperative that students have maximum exposure to the target language in order to comprehend and utilize it in authentic contexts. The teaching of Technical English to the students will take several forms and the focus should be one student's participation. To help students communicate in the target language, for instance, have them work in groups and practice various activities, discussions, and presentations. They can also use visual aids like pictures, images, and spatial understanding to support their learning. Aural (auditory-musical) learning involves employing sound and music, and verbal (linguistic) learning involves using words in both written and spoken forms. In addition to improving their interpersonal abilities, students must have faith in their ability to utilize the target language.

Student Workload (SWL)

Structured SWL (h/sem)	33	Structured SWL (h/w)	2
Unstructured SWL (h/sem)	17	Unstructured SWL (h/w)	1.2
Total SWL (h/sem)	50		

Module Evaluation

		Time/ Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	4	20% (20)	3,6,9,12	All
	Assignments	2	10% (10)	5, 10	All
	Project / Lab.	-	-	-	-
	Report	1	10%	8	All
	Midterm Exam	2 hrs.	10% (10)	7	All

Summative assessment	Final Exam	3 hrs.	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Tenses- Present time tenses, Parts of speech ((Nouns-Verbs-Adjectives-Adverbs), Unit One of the Book (The New Headway-Pre-intermediate level)
Week 2	Tenses- Past time Tenses, Parts of speech (Prepositions-Articles-Pronouns-Conjunctions-Interjections), Unit Two of the Book (The New Headway-Pre-intermediate level)
Week 3	Tenses- Future time tenses , sentence pattern (nine patterns), Irregular verbs, Unit Three of the Book
Week 4	Passive and Active voice in scientific writing, reading comprehension, listening (conversations in shops) , Unit Four of the book .
Week 5	Conditionals, paragraph writing and writing basics, describe places, speaking (talking about plans and ambitions), Unit five of the book
Week 6	verbs and nouns go together and verbs used in academic writing, give directions, reading comprehension, Unit six of the book.
Week 7	Listening skills-engaging in different themes- dialogue starters, speaking skills –Role-play, Unit seven of the book
Week 8	Writing Skills- Punctuation- linking words-emails and formal letters- paragraph writing, Unit eight of the Book
Week 9	Review and Mid-term Exam
Week 10	Language Function(requests-suggestions, offers...etc.), Reading Comprehension, unit ten of the book
Week 11	Modal and semi modal verbs, reading comprehension, exchanging ideas and group discussion , unit eleven of the book
Week 12	Phrasal verbs, collocations, good and bad communicator, unit twelve of the book
Week 13	Comparative and Superlative, making a telephone conversation and news giving , unit thirteen of the book
Week 14	Writing CV-Cover letter, Essay styles and types , unit fourteen of the book
Week 15	Reading comprehension (predicting, guessing the main idea, looking for specific information), Essay writing
Week 16	Revision and Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	
Week 2	
Week 3	
Week 4	
Week 5	
Week 6	
Week 7	

Learning and Teaching Resources		
	Text	Available in the Library?
Required Texts	1- New Headway, English Course, (pre-intermediate level), John and Liz Soars and Mike Sayer, Oxford University Press. 2- Selected ESP materials and listening extracts.	Yes
Recommended Texts	Murphy, R. (1985). Grammar in Use, Rapid Review of Grammar, Infotech: English for Computer Users. (4 th edition). Cambridge. Market Leader (Pre-intermediate English Business Course) by David Cotton, David Falvey, Simon Kent	Online
Websites	Randall's ESL Cyber Listening Lab - English Listening	

APPENDIX:

GRADING SCHEME				
Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings

	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 – 49)	FX – Fail	مقبول بقرار	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note:

NB Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

MODULE DESCRIPTION FORM

Module Information					
Module Title	English Language			Module Delivery	
Module Type	Basic			Theory	
Module Code	UOW107				
ECTS Credits	2				
SWL (hr/sem)	50				
Module Level		1	Semester of Delivery		2
Administering Department		Aircraft Engineering	College	Engineering	
Module Leader	Alaa Akram		e-mail	alaa.akram1995@gmail.com	
Module Leader's Acad. Title		Asst. Lec.	Module Leader's Qualification		MSc
Module Tutor			e-mail		
Peer Reviewer Name			e-mail		
Scientific Committee Approval Date		26/09/2024	Version Number		2024

Relation with other Modules			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents	
Module Aims	

	<p>Nowadays English has a special and predominant role in the communicative sphere of the world. It has also a special identity in the field of education. The teaching of English is highly desirable for the English teacher. Before starting his/her teaching, it requires from the teacher to determine his/her aims and objectives.</p> <p>This module aims to enhance the communication skills of students whose level of English is equivalent to pre-intermediate level. There will be a particular focus on the development of the four language skills (speaking, listening, reading and writing) and on broadening students' vocabulary and syntactical range so that they can communicate easily on a wide range of topics.</p>
Module Learning Outcomes	<p>This semester will help students through enhancing their Knowledge and Understanding and enabling them to use grammar correctly, analyze the element of language and establish the appropriate relationship among linguistic components, in addition to understanding the meaning of sentences and paragraphs. So the learning outcomes will be:</p> <ol style="list-style-type: none"> 1. The course covers core language and skills students need to communicate successfully in technical specializations, 2. give their opinions and participate in discussions on a wide range of topical issues, 3. communicate effectively in written format on a range of contemporary topics, especially the technical ones, 4. understand the key points of a range of moderately complex oral and written texts with relative ease, 5. communicate effectively as part of a multicultural group, 6. manage, interpret and create meaning using a variety of digital devices and tools
Indicative Contents	<p>A- Communicative competences</p> <p>Listening - Understand and identify the main points of dialogues of 230-250 words on familiar topics regularly encountered in life, work, school, etc., within the scope of the curriculum. - Listen and guess meanings (through the expressions and feelings of the speakers) in familiar monologues and conversations in everyday life - Understand the main points of news programs, broadcasts, interviews, etc., on familiar topics which are clearly delivered in simple language, or with illustrative images. [3 Hrs.]</p> <p>Speaking - Pronounce clearly and relatively accurately short dialogues. - Speak and interact with fellow speakers about familiar topics, express personal views and exchange information about the topics covered in the curriculum. - Describe in simple discourse familiar topics, narrate a short story closely related to the topics covered. - Present preparedly the projects on the topics in the curriculum. [2 Hrs.]</p> <p>Reading - Read and comprehend the main points, specific contents of a text of 200 words on current and familiar topics. - Read and understand the argument flow of texts, identify main conclusions in texts using clear language. - Read to find and summarize short texts of everyday use such as simple letters, brochures, using words and structures from the original texts. [3 Hrs.]</p> <p>Writing – write paragraphs (block and indented styles), Write simple connected and coherent texts of 180-200 words; write short reports based on</p>

	<p>suggestions, providing factual information and reasons for the recommendations made in the reports; collect short information from several sources and summarize it. - Complete (write/fill) administrative forms such as CVs and resumes, letter of application for employment, emails, etc. - Write descriptive texts of simple charts and tables. [3 Hrs.]</p> <p>B- Linguistic knowledge</p> <p>Pronunciation: Vowel and consonant syllable, words with different syllables, Words with stress (special cases) – Words without stress, Sentence stress, assimilation, linking vowels with vowels Question, intonation, Homophones, practicing words and terms, phrases, and sentences related to the students' major. [3 Hrs.]</p> <p>Vocabulary: Words related to themes and topics of the course, collocations, words with different meanings and pronunciations. [2 Hrs.]</p> <p>Grammar: parts of speech, past, Present, and future tenses, Word structure (compound nouns), Countable and uncountable nouns. Types on sentences: simple, compound, complex sentences, Articles, language function: commands, requests, offers, advice and instructions. Modal verbs, Relative pronouns and Relative clauses with which-that-who-whom-whose-where-when. Prepositions, Phrasal verbs (including verbs, adverbs and prepositions), comparison showing changing things, Sentences of reason and results and Conjunctions: although, however etc, active and passive, Adverbial clauses of condition, Comparatives and superlatives of adjectives. [2 Hrs.]</p>
--	--

Learning and Teaching Strategies

Strategies	<p>The teacher should prepare his/her students for listening to academic lectures and academic reading to some extent. In addition to that , students should participate in the lecture through the skills of speaking , writing , reading and listening.</p> <p>Students are taught by Communicative language teaching (CLT) in which students are encouraged to communicate with each other in the target language. students need to be exposed to the target language as much as possible to understand and use the target language in real-life situations. A variety of ways will be used to teach students Technical English. For example, work in group, practicing different activities, discussion, presentation to get students to communicate with each other in the target language and to practice using the target language for communication, using pictures, images, and spatial understanding (Visual learning) and Aural (auditory-musical) by using sound and music, and Verbal (linguistic) via using words, both in speech and writing. students need to be confident in their ability to use the target language and develop better interpersonal skills.</p>

Structured SWL (h/sem)	33	Structured SWL (h/w)	2
------------------------	----	----------------------	---

Unstructured SWL (h/sem)	17	Unstructured SWL (h/w)	1.2
Total SWL (h/sem)	50		

Module Evaluation

		Time/ Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	4	20% (20)	3, 6, 9, 12	LO #1 - 6
	Assignments	2	10% (10)	5, 10	LO #1 - 6
	Projects / Lab.	-	-	-	-
	Report	1	10% (10)	13	LO #1 - 6
Summative assessment	Midterm Exam	2 hrs.	10% (10)	7	LO #1 - 6
	Final Exam	3 hrs.	50 % (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Parts of Speech(Nouns-Verbs-Adjectives-Adverbs-Prepositions-Articles-Pronouns-Conjunctions-Interjections), Unit One of the Book (Headway)
Week 2	The components, Structure and kinds of the sentences, Unit Two (Headway) 1-Simple-compound –complex 2-declarative- interrogative –exclamatory – conditional -imperative
Week 3	Tenses - present tenses, Definite and Indefinite Articles, ways of joining sentences
Week 4	Tenses – Past tenses , reading comprehension, Unit Three (Headway)
Week 5	Tenses- future tenses, writing basics and strategies.
Week 6	Passive and active sentence in scientific writing, Unit Four (Headway)
Week 7	Listening skills- How to participate in different topics- how to avoid silence, How to answer the questions of the passage in exam (WH Questions), listening and speaking skills (multiple native conversations).
Week 8	Writing Skills (Punctuation – ways to join sentences- principles of paragraph structure- practice writing), Unit Five (Headway)
Week 9	Mid-term Exam .
Week 10	Idioms and idiomatic expression, Unit Six (Headway)

Week 11	Reading skills (skimming, scanning, and intensive reading), Unit Seven + Unit Eight (Headway)
Week 12	Phrasal verbs , speaking skills(participating in a dialogue and turn taking)
Week 13	Conditional in English, speaking skills (how to make presentation)
Week 14	Comparison and modals, participating in group discussion and be active listener/speaker
Week 15	Writing skills (CV, cover letter, and email writing)
Week 16	Preparatory week before the Final Exam

MODULE DESCRIPTOR FORM

Module Information					
Module Title	Fluid Mechanics			Module Delivery	
Module Type	CORE			Theory Lab Tutorial	
Module Code	ENG232				
ECTS Credits	6				
SWL (hr/sem)	150				
Module Level		2	Semester of Delivery		3 / 4
Administering Department		Aircraft Engineering	College	Engineering	
Module Leader	Dr. Mohammed Aljibory		e-mail	Dr.mohamma.wahab@uokerbala.edu.iq	
Module Leader's Acad. Title		Professor	Module Leader's Qualification		Ph.D.
Module Tutor	None		e-mail	None	
Peer Reviewer Name			e-mail		
Review Committee Approval		01/06/2024	Version Number	2024	

Relation with Other Modules			
Prerequisite module	**	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To develop problem solving skills and understanding of fluid mechanics theory through the application of techniques. 2. Explain the concept of manometers and apply appropriate equations to determine pressures. 3. Calculate the hydrostatic pressure force on a plane or submerged surface. 4. Understand and describe the fundamental principles and governing equations of fluid. 5. Analysis the Friction losses in pipes. 6. Understand and describe the momentum Equation, applications of momentum, principal Analysis 7. Explain Dimensional analysis and similarity
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Recognize how fluid static effect on the system that contain fluid. 2. List the various terms associated with fluid static from pressure and properties of fluid. 3. Summarize the means to calculate the hydrostatic pressure force. 4. Fluid dynamics involves the application of mathematical equations and models to describe fluid behavior. 5. Fluid dynamics enables learners to analyze and interpret fluid flow patterns. They gain the ability to identify and understand different types of flow, including laminar flow, turbulent flow, and transitional flow. This understanding helps in predicting and characterizing fluid behavior in various scenarios. 6. Summarize the means to. The Bernoulli Equation and it Application. 7. Discuss Liner momentum Equation, Applications of momentum principle. 8. Explain Friction losses in pipes and Analysis of piping system
Indicative Contents	<ol style="list-style-type: none"> 1. General introduction to fluid science, Dimensions, Dimensional Homogeneity, and Units, Viscosity, Vapor Pressure, cavitation, Surface Tension. [4 hrs] 2. Pressure at a point. Variation of pressure in a static fluid with Depth. Pressure measurement (barometer pressure, Bourdon pressure gages, manometers). Hydrostatic Force on submerged Plane Surface. [16 hrs] 3. Classification of fluid flow, The continuity equation. Euler's equation of motion along streamline. Bernoulli's equation and its applications. Pitot and Pitot static tube, Orifice and Venture Meter (Flow Measurement). Energy equation. [16 hrs] 4. Laminar flow and Turbulent flow. Pump and turbine Major and secondary losses in pipes Connecting pipes in series, parallel and mixed. [16hrs]

5. Impact of a jet on a plane surface. Force due to flow round a curved vane. Force due to the flow of fluid round a pipe bend. [10 hrs]
6. The Pi-theorem, Dimensionless parameters. Models study. [10 hrs]

Learning and Teaching Strategies

Strategies	The main strategy that will be adopted in delivering this module is Encourage students to pay attention to the subject by linking it to the daily reality in which a person lives and the importance of studying this course because of its impact on his real life real world .

	Final Exam	3 hrs.	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	General definitions, Newton's law of viscosity, Surface tension, Vapor Pressure, cavitation.
Week 2	Pressure at a point in a static fluid, Variation of pressure in a static fluid with depth.
Week 3	Pressure measurement (barometer pressure, Bourdon pressure gauge ,manometers).

Week 4	Hydrostatic Force on submerged Plane Surface.
Week 5	Classification of fluid flow, The continuity equation. Euler's equation of motion along streamline. Bernoulli's equation
Week 6	Bernoulli's equation and its applications. Pitot and Pitot static tube, Orifice and Venture Meter (Flow Measurement).
Week 7	Energy equation.
Week 8	Laminar flow and Turbulent flow.
Week 9	Major and secondary losses in pipes Connecting pipes in series, parallel and mixed.
Week 10	Pump and turbine
Week 11	Impact of a jet on a plane surface.
Week 12	Force due to flow round a curved vane.
Week 13	Force due to the flow of fluid round a pipe bend.
Week 14	The Pi-theorem, Dimensionless parameters.
Week 15	Models study.
Week 16	Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Determination of coefficient of viscosity for a liquid by stokes method.
Week 2	Exp. 2: Borden gauge calibration.
Week 3	Exp. 3: Center of pressure.
Week 4	Exp. 4: Volume flow rate measurement/Flow through Venturi meter.
Week 5	Exp. 5: Discharge through an orifice.
Week 6	Exp. 6: Impact of jet.
Week 7	Exp. 7: Friction loss along pipes.

Learning and Teaching Resources

كلية الهندسة

Relation With Other Modules			
Prerequisite module	AIE232	Semester	3
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
Module Aims	1. To help students learn as much introduction to flight and flight theory principle as possible in which this subject is regarded as the base for all aeronautic subjects.		

	<p>2. The development of the basic principles of aeronautics is the entry point for consolidating the necessary principles of specialized aircraft mechanics engineering subjects and providing the necessary materials for them, which include topics of aerodynamic, flight theory, design, control and stability of aircraft, gas dynamic, jet propulsion theory and aircraft performance.</p>
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Knowledge and understanding. <ul style="list-style-type: none"> - Standard Atmosphere. - Principles of Aviation. - Aerodynamic forces and moments on the aircraft. - Wings and infrasound sections - and ultrasonic / characterization and characteristics. - Aerodynamic forces in stable horizontal flight. - Performance curves in terms of propulsion and performance curves in terms of power. 2. Subject-specific skills. <ul style="list-style-type: none"> - Explanation of the flight principles of fixed-wing and rotary-wing aircraft (helicopters). - Determination of the anaerobic forces acting on a fixed-wing and rotary-wing aircraft. - Determining the required thrust, the available thrust, the lift to drag ratio. 3. Thinking Skills. <ul style="list-style-type: none"> - To fully comprehend the scientific material and develop students' engineering sense. - Understand and comprehend the applications of the scientific material on the fuselage (structure), power station (engines), control surfaces, wing, aircraft systems and instrumentation. - Understand the limits of the aircraft's performance. - To prepare students for psychological connection and a feeling of satisfaction, happiness and reassurance for the department and the branch in which they are studying 4. General and Transferable Skills. <ul style="list-style-type: none"> - Develop the student's ability to use software, modern equipment, information technology, and the use of the Internet to obtain advanced, promising and future knowledge, assimilate and understand and link its relationship to engineering applications.
Indicative Contents	<p>Lectures are used to deliver the fundamental knowledge in relation to various aspects of aerodynamic characteristics for aircraft as well as their influence in determining the aircraft performance for atmospheric flight (All Outcomes).</p> <p>Indicative content includes the following.</p>

	<p><u>Part A - Fundamentals Aircraft Nomenclature</u></p> <p>History of aeronautics; Physical properties of atmosphere; Airfoil lift, drag and moments; Airfoil data; Compressibility correction; Finite wing aerodynamics; Induced drag; High-lift mechanisms. [25 hrs]</p> <p><u>Part B - Aircraft Performance</u></p> <p>Drag polar; Typical steady level flight; Thrust and power requirements for cruising flight; Altitude effects; Indicated and True Air Speed. [27 hrs]</p>
Learning and Teaching Strategies	
Strategies	<p>Develop the student's ability to understand aircraft theory and arrange knowledge related to aircraft mechanics from a correct and logical understanding and analysis of the various sciences related to aircraft, understanding hypotheses, and interpreting the performance of the aircraft physically, to obtain the initial knowledge necessary to understand the specialized topics in the field of aircraft mechanics engineering.</p> <p>Develop the student's ability and familiarize him with the pattern of exam questions and the arrangement and sequence of the solution in order to be able to correctly analyze the question and thus outline the appropriate solution sequence through method books, auxiliary books and theoretical lectures, in addition to solving exercises and getting used to the method of reaching the correct solution.</p>

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Fundamentals: Introduction History of aeronautics Pilot's Operating Handbook
Week 2	Standard atmosphere (ISA): The atmosphere. Physical properties of gases in atmosphere.
Week 3	Airplane types: Airplane classification. Airplane parts.
Week 4	Nomenclature: Airfoils-Nomenclature. Wings-Nomenclature. Flaps. Types of airfoils. Modern airfoils.
Week 5	Wings and airfoils characteristics: Mean aerodynamic chord. Wing Area. Aerodynamic center. Center of pressure.
Week 6	Aerodynamic forces and moments on airplane: The airplane as a rigid body. Airplane axis system. Forces and moments.
Week 7	Flight principles: Bernoulli's principle. Venturi effect. Relative wind.
Week 8	Lift: Lift coefficient. Lift curves characteristics. Change of lift coefficient with the angle of attack.
Week 9	Drag: Drag estimation at low speeds. Drag estimation at high speeds. Types of drag: Parasite drag. Induced drag. Wave drag.
Week 10	Aerodynamic forces on steady level flight: Lift force. Drag force.

	Gravity force. Thrust force.
Week 11	Level flight Performance: Steady level flight. Typical steady level flight. Cruise flight.
Week 12	Holding flight. Mach number. Indicated Air Speed. True Air Speed.
Week 13	Performance curves in terms of thrust: Change of required thrust with airspeed. Change of required thrust with altitude. Change of available thrust with airspeed and altitude.
Week 14	Performance curves in terms of power: Change of required power with airspeed. Change of required power with altitude.
Week 15	Change of available power with airspeed and altitude. Minimum power required.
Week 16	Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Atmosphere calculator
Week 2	Exp. 2: Airfoil design and analysis
Week 3	Exp. 3: Wing design and analysis
Week 4	Exp. 4: Airplane Performance
Week 5	Exp. 5: Wind Tunnel
Week 6	Exp. 6:
Week 7	Exp. 7:

MODULE DESCRIPTOR FORM

Module Information					
Module Title	Manufacturing Processes			Module Delivery	
Module Type	SUPPLEMENT			Theory	
Module Code	AIE245				
ECTS Credits	3				
SWL (hr/sem)	75				
Module Level	2		Semester of Delivery	4	
Administering Department	Aircraft Engineering		College	Engineering	
Module Leader	Zahraa Salah		e-mail	zahraasalahjassim@gmail.com	
Module Leader's Acad. Title	Asst. Lec.		Module Leader's Qualification	M.Sc.	
Module Tutor	None		e-mail	None	
Peer Reviewer Name			e-mail		
Review Committee Approval	01/01/2025		Version Number	2024	

Relation With Other Modules			
Prerequisite module	AIE235	Semester	3
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. Describe the various manufacturing processes that are used for the production of Mechanical parts and products. 2. Classify manufacturing processes according to the needs of products construction. 3. Understand how to use the theoretical knowledge of various manufacturing processes 4. Analyze, compare and finally gain theoretical experience for the advantages and limitations of different manufacturing processes. 5. Evaluate the better way of manufacturing and construction of mechanical parts or products by means of various manufacturing processes and the corresponding manufacturing Machines. 6. Design the production of a mechanical component or a specific product using the Manufacturing processes of casting, bulk deformation, sheet metal forming, joining CNC machine.
Module Learning Outcomes	<p>Knowledge and Understanding</p> <ol style="list-style-type: none"> 1. Classification of the different types of manufacturing processes. 2. Distinguish between different types of casting and differentiate between their output product characteristics. 3. Knowledge of, the sheet metal forming such as bending ,starching squeezing ,plunge and the bulk forming methods such as rolling, extrusion ,forging . 4. Characterize the major machining operations of turning, milling, and drilling via description of cutting tools used and basic components of the machine tools. 5. Have a thorough knowledge of the different operating processes such as turning, milling and cutting by describing the cutting tools used and the basic components of the machine tools. 6. Knowledge of cutting tools and various traditional and advanced cutting processes. 7. Knowledge and distinction between different welding methods such as gas welding, resistance welding, different types of electric arc welding and advanced welding methods such as laser welding and plasma welding. 8. Knowing the types, and how to operate automated CNC machines. <p>Specific skills</p> <ol style="list-style-type: none"> 1. How to choose the suitable type of manufacturing process. 2- Enable the student to learn and understand the Classification and the major of the manufacturing processes

	<p>3- Correlate the material type with the possible fabrication processes.</p> <p>4- Describe the operations and tools for major manufacturing processes.</p> <p>5- Highlight the process design parameters to eliminate defective products.</p> <p>6- Enable the student to know the traditional and non-traditional manufacturing process</p>
Indicative Contents	<p>1. Describe the various manufacturing processes that are used for the production of Mechanical parts and products [6 hrs].</p> <p>2. Understand the different types of casting process types such as: sand casting, shell casting, pressure die casting, and continuous casting [6 hrs].</p> <p>3. Understand the different types of defects that occurs in sand casting and the methods to prevent defects generation [9 hrs]</p> <p>4- Understand the metal forming methods that used with the mechanical parts such as rolling process, extrusion process, wire drawing, sheet drawing and deep drawing processes [9 hrs].</p> <p>5- Evaluate the better way of welding techniques that used with metals and how to select the suitable welding type for each kind of materials with understanding their welding mechanism [6 hrs].</p> <p>6- Understand the non-traditional cutting methods that available and how to use [6 hrs].</p>
Learning and Teaching Strategies	
Strategies	The development of the student's ability to apply the knowledge in order to be able to correct analysis of the question and thus put the appropriate assumptions and interpretation to reach a solution. Through textbooks and lectures, in addition to the seminars.

Student Workload (SWL)

Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	metal process Introduction of metal process. Classification of the main types of manufacturing process
Week 2	Casting process Sand Casting : Sand mold Type of patterns Pattern Materials Pattern allowances
Week 3	Molding sand Properties Cores –Types and applications Molding machines– Types and applications; Melting furnaces : Blast and Cupola Furnaces;
Week 4	Principle of special casting processes : Shell casting Investment casting Continues casting Pressure die casting Centrifugal Casting
Week 5	Defects General defects in all casting methods. Defects in Sand casting.
Week 6	Metal forming Introduction for cold and hot working Recrystallization temperature effect Rolling process Types of rolling mill
Week 7	Extrusion process Direct extrusion Indirect extrusion Impact extrusion Hydrostatic extrusion

Week 8	Forging process
Week 9	Drawing processes: Wire drawing. Tube drawing. Deep drawing
Week 10	Machining operations (Cutting): Cutting conditions. Cutting tools. Turning operations. Milling operations. Drilling operations
Week 11	Welding processes: Classification of welding processes. Fusion welding processes. Electric Arc Welding. Metal Arc Welding. Tungsten and Metal Inert gas welding
Week 12	Fusion welding: Oxy acetylene welding. Thermite welding. Laser welding. Diffusion welding. Brazing and soldering
Week 13	Welding by pressure: Electric resistance welding. Friction welding. Explosion welding
Week 14	Non-traditional cutting processes: Cutting with ultrasonic pulses.
Week 15	Electrochemical operation process. Operation process by laser
Week 16	Final Exam

Relation With Other Modules			
العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	1. The foundation for understanding classification of engineering material and crystal structure. 2. Topics are designed to explore the mechanical properties of metals and their alloys, composites and advanced material. 3. The means destructive and nondestructive testing, as well as knowing the main testing of material such as tensile and hardness test. 4. The foundation for understanding the heat treatment for steel 5. Concepts of use of ferrous and none ferrous materials for various applications are highlighted.		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Describe the mechanical properties of metals, and their alloys and various crystal structures. 2. Understand the microstructures of ferrous and non-ferrous alloy. 3. Apply phase diagrams to read them and from the diagram predict the microstructure after different heat treatments. 4. Explain the processes of heat treatment of various alloys. 5. Explain the different types of non-destructive tests for metal and alloy. 6. Know about composite materials and Nano and smart material as well as applications.		
Indicative Contents المحتويات الإرشادية	1. Describe how different kinds of materials (metals including alloys, ceramics and polymers) are structured in terms of atomic bonding and crystal structure and also describe how the structure will affect some of their properties; Recognize		

	<p>product-related problem that requires taking into account the material's microstructure [9 hrs].</p> <p>2. Describe how mechanical properties of the materials are influenced by a change of the microstructure; to relate this change to the specific hardening mechanism [9 hrs].</p> <p>3. Understand the test mechanisms of different types of hardness test methods and how to select the suitable kind for each material [9 hrs]</p> <p>4. Apply phase diagrams to read them and from the diagram predict the microstructure after different heat treatments [9 hrs].</p> <p>5. Choose suitable heat treatment methods for specific properties and microstructure; discuss the choices of criteria to reach a good result [6hrs].</p>
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	<p>The development of the student's ability to apply the knowledge in order to be able to correct analysis of the question and thus put the appropriate assumptions and interpretation to reach a solution. Through textbooks and lectures, in addition to the seminars.</p>

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

	Material Covered
Week 1	Classification of engineering material Crystal Structure Unit cell , space lattice Crystal systems Body Centered Cubic Face Centered Cubic, Hexagonal Closed Pack structures.
Week 2	Mechanical and physical properties Tensile and compression test Engineering Stress-strain diagram Actual stress strain diagram Toughness Ductility.
Week 3	Micro and macro hardness test Types of hardness test Brinell, test Rockwell test Vickers test Knoop hardness test
Week 4	Impact test Izod test Charpy test The difference between izod and test Calculate the impact energy
Week 5	Nondestructive Testing of Materials Types of NDTs Principle, procedure, advantages, Limitations The non-destructive testing (NDT) methods:

	X-rays and Gamma-rays Radiography, Magnetic particles inspection Ultrasonic testing, Dye penetrate inspection
Week 6	Thermal equilibrium diagrams Solubility in the solid state Phase Solid solutions, compounds and mechanical mixtures Lever rule Applications on binary phase diagrams Components completely soluble, Completely insoluble or partially soluble in the solid state.
Week 7	Thermal equilibrium diagram for Fe- Fe₃C Types of transformations: - Eutectic transformation Eutectoid transformation Peritectic transformation Lever rule
Week 8	Alloy steel Classification of steel. Effect of alloying elements on the properties of steel. Carbon Steel and alloy steel, stainless steel, tool and die steel, high temperature alloys etc. Selection of steel for power plants Application and various machine components
Week 9	Heat treatments The aim of heat treatment Types of heat treatments Annealing, Normalizing, Hardening,
Week 10	Cast Iron Classification of cast iron. Properties and uses of grey, white, malleable, and spheroidal graphite cast iron. Heat treatment of cast iron. Use of specific grades of cast iron in power plants and different engine parts
Week 11	Nonferrous alloy -Aluminum alloy and its application Classification Properties Application of -Aging and precipitation hardening Al-Si, Al-Mg and Al-Cu alloys in industry
Week 12	Copper alloy and its application Classification

	Properties Applications
Week 13	Composite material Classification of composites, Metal matrix composite Polymer matrix composite, Ceramic matrix composite Properties and applications of composites.
Week 14	Ceramic and polymer Materials Properties of ceramics, types and applications of ceramics. Properties of polymers, types and applications of polymers
Week 15	Nano materials, Selection of Material and applications Smart materials Introduction to Nano materials, Smart materials. How to select material in specific application and industrial application
Week 16	Final Exam

Relation With Other Modules			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To provide a course of high academic quality in Mathematics in a challenging and supportive learning environment that encourages students to reach their full potential, personally and academically. 2. To provide a course that is suitable both for students aiming to pursue research and for students going into other careers. 3. To provide an integrated system of teaching which can be tailored to the needs of individual students. 4. To develop in students the capacity for learning and clear logical thinking. 5. To continue to attract and select students of outstanding quality. 6. To provide an intellectually stimulating environment in which students have the opportunity to develop their skills and enthusiasm to their full potential.
Module Learning Outcomes	<p>Knowledge and Understanding: This Course will develop learners' ability to:</p> <ol style="list-style-type: none"> 1. Understand and use mathematical concepts and relationships 2. Select and apply operational skills in algebra, geometry, trigonometry and statistics within mathematical contexts 3. Select and apply skills in numeracy 4. Use mathematical models 5. Use mathematical reasoning skills to interpret information, select a strategy to solve a problem, and communicate solutions. <p>Subject-specific skills: It is expected that learners will develop the following:</p> <ol style="list-style-type: none"> 6. Broad, generic skills through this Course. 7. Skills for Learning, and drawn from the main skills areas listed below. 8. Skills for Life 9. and Skills for Work <p>These must be built into the Course where there are appropriate opportunities.</p>
Indicative Contents	<p>Indicative content includes the following.</p> <p>Vector and the geometry of space: Three-Dimensional Coordinate Systems, Vector Algebra Operations, unit Vectors, the Midpoint of a Line Segment, The Dot Product, The angle between Vectors, and The Cross Product. [12 hrs]</p> <p>Matrices: Types of matrices. Elementary operations with matrices and vectors. Determinants. Linear equations. Row reduction method. Cramer's rule. Applications. [18 hrs]</p> <p>Limits and continuity: Rates of Change and Limits, calculating limits using the limit law, infinite</p>

	<p>limits and vertical asymptotes, continuity, tangents and derivatives. [12 hrs]</p> <p>Differentiation:</p> <p>Inverse Functions and Their Derivatives. Natural Logarithms. The Exponential and Logarithm Functions. Trigonometric Functions. Inverse Trigonometric Functions. Hyperbolic Functions. Inverse Hyperbolic Functions. Calculating Derivatives from the Definition. Differentiation Rules for (functions). Derivatives of Trigonometric Functions. The Chain Rule. Implicit Differentiation. Derivatives of Higher Order. [22 hrs]</p> <p>Applications of derivatives:</p> <p>Extreme Values of Functions. Increasing and Decreasing Functions. Concavity and Curve Sketching. Applied Optimization Problems. L'Hôpital's Rule. The Mean Value Theorem. Motion along a Line: Displacement, Velocity, Speed, Acceleration. Related Rates Equations (application on Implicit Differentiation). Approximate calculation. [18 hrs]</p> <p>General Applications. [5 hrs]</p>
--	--

Learning and Teaching Strategies

Strategies	<p>All lectures reflect the higher values, purposes and principles. They offer flexibility, provide more time for learning, focus on skills and applying to learn, and scope for personalization and choice.</p> <p>In this Course, and its component Units, there will be an emphasis on skills development and the application of those skills. Assessment approaches will be proportionate, fit for purpose and will promote best practices, enabling learners to achieve the highest standards they can.</p> <p>This course provides learners with opportunities to continue to acquire and develop the attributes and capabilities of the four capacities, as well as skills for learning, skills for life and skills for work.</p>

Indicative Contents	<p>Indicative content includes the following.</p> <p>Integration: Definite integration, basic integration formulas, integration by parts, trigonometric functions integrals, odd and even powers of sine and cosine, trigonometric functions substitutions, completing the square method, integration of rational functions by partial fractions. [34 hrs]</p> <p>Applications of definite integrals: The area under the graph of nonnegative functions, mean value theorem for definite integrals, definite integral, polar coordinates, double integral, distance, velocity and acceleration, volumes by slicing and rotation about an axis, volumes by cylindrical shells, lengths of plane curves, areas of surfaces</p>

	<p>of revolution. [25 hrs]</p> <p>Complex numbers: Algebra of complex numbers, Argand diagrams, Euler's formula, De Moivre's theorem. Roots. [12 hrs]</p> <p>Curve fitting: Simple linear regression, Polynomial regression. [12 hrs]</p> <p>General Applications [4 hrs]</p>
Learning and Teaching Strategies	
Strategies	<p>All lectures reflect the higher values, purposes and principles. They offer flexibility, provide more time for learning, focus on skills and applying to learn, and scope for personalization and choice.</p> <p>In this Course, and its component Units, there will be an emphasis on skills development and the application of those skills. Assessment approaches will be proportionate, fit for purpose and will promote best practices, enabling learners to achieve the highest standards they can.</p> <p>This course provides learners with opportunities to continue to acquire and develop the attributes and capabilities of the four capacities, as well as skills for learning, skills for life and skills for work.</p>

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Integration: Definite integration. Basic integration formulas.
Week 2	Methods of Integration: Integration by parts.
Week 3	Trigonometric functions integrals.
Week 4	Odd and even powers of sine and cosine.
Week 5	Completing the square method.
Week 6	Partial fractions.
Week 7	Applications of definite integrals: The area under the graph of nonnegative functions. Mean value theorem for definite integrals. Definite integral. Double integral.
Week 8	Distance, velocity and acceleration. Volumes by slicing and rotation about an axis.
Week 9	Volumes by cylindrical shells. Lengths of plane curves. Areas of surfaces of revolution.
Week 10	Polar coordinates
Week 11	Complex numbers: Algebra of complex numbers. Argand diagrams. Euler's formula.
Week 12	De Moivre's theorem. Roots.
Week 13	Curve fitting: Simple linear regression.
Week 14	Polynomial regression.
Week 15	General Applications
Week 16	Preparatory week before the Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1:
Week 2	Exp. 2:
Week 3	Exp. 3:
Week 4	Exp. 4:
Week 5	Exp. 5:
Week 6	Exp. 6:

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	<ol style="list-style-type: none"> 1. To provide a course of high academic quality in Mathematics in a challenging and supportive learning environment that encourages students to reach their full potential, personally and academically. 2. To provide a course that is suitable both for students aiming to pursue research and for students going into other careers. 3. To provide an integrated system of teaching which can be tailored to the needs of individual students. 4. To develop in students the capacity for learning and clear logical thinking. 5. To continue to attract and select students of outstanding quality. 6. To provide an intellectually stimulating environment in which students have the opportunity to develop their skills and enthusiasm to their full potential. 		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>Knowledge and Understanding: This Course will develop learners' ability to:</p> <ol style="list-style-type: none"> 1. Use mathematical models 2. Understand and use mathematical concepts in solving mathematical differential equations kinds. 3. Select and apply skills in dealing with geometric series, power series and Fourier series. 4. Use mathematical reasoning skills to interpret information, select a strategy to solve a problem, and communicate solutions. <p>Subject-specific skills: It is expected that learners will develop the following:</p> <ol style="list-style-type: none"> 5. Skills for Learning, and drawn from the main skills areas listed below. 6. Skills for Life 7. and Skills for Work <p>These must be built into the Course where there are appropriate opportunities.</p>		
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p>Ordinary Linear Differential Equations: 1st order differential equations, Separable, Homogeneous, Exact, Linear, Bernoulli, 2nd Order Differential Equations, Homogeneous, Non-Homogeneous. [32 hrs]</p> <p>Sequences and Series:</p>		

	<p>Sequence, Series, Geometric Series, Tests of Convergence, Definition, The General Term Test, The Integral Test, The Comparison Test, The Limit Comparison Test, The Ratio Test, The Root Test, Alternating Series, Power Series, Interval of Convergence, Taylor Series, Maclaurin Series, Applications. [24 hrs]</p> <p>Fourier Series: Periodic Function, Even and Odd Functions, Half Range Expansion Function. [9 hrs]</p> <p>Partial Differentiation Definition, Mechanism of Differentiation, Functions of Two Variables, Functions of Higher Variables. [6 hrs]</p> <p>General Applications. [6 hrs]</p>

Prerequisite module	ENG124	Semester	2

Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	1. Educate the student in the second stage the fundamental of mechanical drawing. 2. Explore the standard element of mechanical drawing such as bolts, keys, springs, and different types of gears. 3. Draw the assembled mechanical parts and determine the mechanism or method of assembly 4. Helping to understand the map of mechanical drawing and the symbols which it contain such as welding, fit and tolerance, and surface finishing.		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Identify the components and fundamentals of mechanical drawing. 2. Learn how to interpret maps in mechanical drawing. 3. Recognize and understand all symbols and standards associated with mechanical drawing. 4. Identify the various methods of mechanical drawing. 5. Learn how to select the optimal parameters for calculations to suit the drawing. 6. Identify all types of gears, such as spur gears, bevel gears, worm gears, and helical gears, and their calculations. 7. Evaluate the student's ability to illustrate the subject explained to them through drawing. 8. Establish connections between what is learned and real-world applications. 9. Complete drawings within specified time frames. 10. Develop the student's abilities to use computers and designated programs in the field of mechanical drawing, linking them to manual drawing. 11. The ability to represent mechanical parts individually, collectively and assembled.		
Indicative Contents المحتويات الإرشادية	* Mechanical Drawing [9 hrs] Fastening Tools and Method of Drawing Them: - Bolts and Screws, Nuts and Washers, Stud Bolts.		

Joining by Bolts or Screws**Assembly Drawing***** CAD [2 hrs]****Application on computer:**

Drawing of primitives: box, cylinder, cone etc.

*** Mechanical Drawing [3 hrs]****Rivets:**

- Classifications of Rivets, Method of Drawing and Joining Rivets

*** Mechanical Drawing [3 hrs]****Keys:**

- Classifications of Keys, Method of Drawing and Joining Keys.

*** CAD [2 hrs]****Application on computer:**

Features : extrude , revolve,etc.

*** Mechanical Drawing [4 hrs]****Springs:**

- Classifications of Springs, Method of Drawing Compression Spring.

*** Mechanical Drawing [4 hrs]****Welding Signs:**

- Types of Welding, Representing Welding Signs on Bodies.

*** CAD [2 hrs]****Application on computer:**

Boolean operation. Union , subtract and intersect. Applications of Boolean operation.

*** Mechanical Drawing [3 hrs]****Pins:** Classifications of pins**Surface Finishing:** Representing Welding Signs on Bodies*** Mechanical Drawing [4 hrs]****Tolerances:**

- Basic Size, Deviations, Limits of Size, Tolerance, Representing Deviations on Zero Line.

*** CAD [2 hrs]****Application on computer:**

Basic concepts on 3D. 3D view.

	<p>* Mechanical Drawing [3 hrs] Fits: - Types of Fits * CAD [2 hrs] Application on computer: Projection definition</p> <p>* Mechanical Drawing [12 hrs] Gears: - Classifications of Gears, Drawing of Spur Gear, Bevel Gear and worm gear, Gears Assembly Drawing</p> <p>* CAD [2 hrs] Application on computer: Modify of 3D solid: move, rotate, array, mirror etc. UCS with applications.</p> <p>* Mechanical Drawing [3 hrs] Detailed Drawing</p> <p>* CAD [2 hrs] Application on computer: Draw welding assembly.</p>
<p align="center">Learning and Teaching Strategies استراتيجيات التعلم والتعليم</p>	
Strategies	<ul style="list-style-type: none"> - Provide the student with theoretical lectures prepared by the lecturer, explaining the subject of drawing in detail and demonstrating it in front of the students. - Bring some samples of the drawing subject to the class to confirm understanding and illustrate how it works. - Discuss some students' mistakes and how to avoid them.

MODULE DESCRIPTOR FORM

Module Information					
Module Title	Physics			Module Delivery	
Module Type	CORE			Theory Lab Tutorial	
Module Code	ENG113				
ECTS Credits	8				
SWL (hr/sem)	200				
Module Level	1		Semester of Delivery	1	
Administering Department	Aircraft Engineering		College	Engineering	
Module Leader	Mohammed Wahhab Kazim		e-mail	dr.mohammad.wahab@uokerbala.edu.iq	
Module Leader's Acad. Title			Module Leader's Qualification	Ph.D.	
Module Tutor			e-mail		
Peer Reviewer Name			e-mail		
Review Committee Approval	26/09/2024		Version Number	2024	

Relation With Other Modules			
Prerequisite module	None		Semester
Co-requisites module	None		Semester
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To assist students to understand the fundamental principles of engineering mechanics (Statics and Dynamics) as applied to Physics. 2. To develop problem solving skills and understanding of principles of Physics theory through the application of techniques as they relate to the different fields of engineering. 3. To develop problem solving skills and understanding of Newton's law through the application of techniques. 4. To understand how analysis of vectors, forces, resultant, moments, couples, and equilibrium in two and three dimensions' problems. 5. To comprehend how clarification of friction and analysis in two dimensions' problems. 6. To understand the motion of particles (kinematics and kinetic), and the other subjects as it sequenced.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Enable the student to learn and understand the basic physical concepts, mass, forces, quantities and vectors at Mechanical Engineering 2. The student should understand and be able to apply Newton's Laws. 3. The student should Know the analysis of forces in Two Dimensions 4. The student should Know the analysis of System Isolation and the Free-Body Diagram 5. The student should Know how can find the Equilibrium Conditions 6. The student should Know the analysis of forces in Three Dimensions 7. The student should know the analysis of the Friction forces and their types, and the other subjects as it sequenced by the Course Materials and Schedule. 8. The student should understand and be able to relate the kinematics of particles 9- The student should study the Kinematics of particles Introduction and Rectilinear motion of dynamics problems in straight line 10- The student should study the Kinematics of particles as a Curvilinear motion. 11- The student should understand and be able to apply Newton's Laws to particles to solve problems related to dynamic behavior.
Indicative Contents	<p>Indicative content includes the following.</p> <p>Part A - Introduction to Physics: The basic physical concepts, mass, forces, quantities and vectors at Mechanical Engineering [6 hrs].</p> <p>Part B - Statics Two-Dimensional Force Systems:</p>

	<p>External and Internal Effects, Principle of Transmissibility, Force Classification, Rectangular Components, Moments and Couples, and Resultants [18 hrs].</p> <p>Equilibrium in Two Dimensions: System Isolation, the Free-Body Diagram, and Equilibrium Conditions [12 hrs].</p> <p>Friction: Introduction, and type of friction, and Dry Friction [6 hrs].</p> <p>Three-Dimensional Force Systems: Rectangular Components, Moments and Couples, and Resultants [12 hrs].</p> <p>Equilibrium in Three Dimensions: System Isolation, the Free-Body Diagram, Equilibrium Conditions and the Categories of Equilibrium [7 hrs].</p> <p>Part C - Kinematics of particles: Rectilinear motion [5 hrs].</p> <p>Curvilinear motion: x-y coordinates, Normal – tangential coordinates, and Polar – coordinates [5 hrs].</p> <p>Relative Motion (Translating Axes) Relative motion, Motion relative to a frame in translation, and Constrained Motion of Connected Particles [5 hrs].</p> <p>Part D - Kinetics of Particles: Newton's 2nd law, Rectangular Components, Tangential and normal components, Radial and transverse components [6 hrs].</p> <p>Kinetics of particles: Introduction, Force, Mass, Acceleration, Newton's 2nd law, Rectangular components, Tangential and normal components, Radial and transverse components and problems [10 hrs].</p>
Learning and Teaching Strategies	
Strategies	<p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p>

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1	Introduction to Physics: Basic concepts, Newton's Law, and Vectors
Week 2	Two-Dimensional Force Systems: External and Internal Effects , Principle of Transmissibility, and Force Classification
Week 3	Two-Dimensional Force Systems: Rectangular Components, and Moments and Couples.
Week 4	Two-Dimensional Force Systems: Resultants
Week 5	Equilibrium in Two Dimensions: System Isolation and the Free-Body Diagram
Week 6	Equilibrium in Two Dimensions: Equilibrium Conditions
Week 7	Friction: Introduction, and type of friction, and Dry Friction.
Week 8	Three-Dimensional Force Systems: Rectangular Components, and Moments and Couples.
Week 9	Three-Dimensional Force Systems: Resultants

Week 10	Equilibrium in Three Dimensions: System Isolation and the Free-Body Diagram, and Equilibrium Conditions and the Categories of Equilibrium
Week 11	kinematics particles: Introduction and Rectilinear motion.
Week 12	Curvilinear motion: Plane Curvilinear Motion Rectangular Coordinates (x-y), Normal – tangential coordinates ($n-t$), and Polar – coordinates ($r-\theta$).
Week 13	Relative Motion (Translating Axes) Motion relative to a frame in translation, Constrained Motion of Connected Particles
Week 14	Kinetics of particles: Introduction, Force, Mass, and Acceleration Newton's 2 nd law. Rectangular components.
Week 15	Kinetics of particles: Tangential and normal components. Radial and transverse components.
Week 16	Preparatory week before the Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: THE STIFFNESS OF LINEAR SPRING (HOOKE'S LAW)
Week 2	Exp. 2: FORCE RESULTANT OF TWO-DIMENSIONAL FORCE SYSTEMS
Week 3	Exp. 3: STATIC FRICTION COEFFICIENT OF SIMILAR AND DISSIMILAR SURFACES
Week 4	Exp. 4: ACHIEVING THE BASIC LAW OF THE ROTATIONAL MOVEMENT
Week 5	Exp. 5:
Week 6	Exp. 6:
Week 7	Exp. 7:

Module Type	CORE			Theory Lab Tutorial	
Module Code	AIE242				
ECTS Credits	6				
SWL (hr/sem)	150				
Module Level	2		Semester of Delivery	4	
Administering Department	Aircraft Engineering		College	Engineering	
Module Leader	Ghanim Kadhim Abdulsada		e-mail	Ghanim.sada@uowa.edu.iq	
Module Leader's Acad. Title	Professor		Module Leader's Qualification	Ph.D.	
Module Tutor	None		e-mail	None	
Peer Reviewer Name			e-mail		
Review Committee Approval	01/01/2025		Version Number	2024	

Relation With Other Modules			
Prerequisite module	**	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. To assist students to understand the fundamental principles of all kind of Stresses. 2. To develop problem solving skills and understanding of principles of Tensile test through the description of material behavior during the test. 3. To develop problem solving skills and understanding of thermal stresses through the application of techniques. 4. To understand how analysis of torsional shear stress and shear strain. 5. To comprehend how clarification of beam, and loading types. Draw the Shear force and Bending Moment diagrams in beams. 6. Analyze the stresses on beam: bending stress, transverse shear stress, combine stress with drawing Mohr's circle. 7. To develop problem solving skills and understanding of Beam Deflection. 8. Study the stress induced in relatively long Columns (Euler's Column Equation).
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Enable the student to learn and understand the simple stress and simple strain 2. The student should understand and be able to apply Hook's Laws. 3. Enable the student to learn and solve the Statically Indeterminate Problems: 4. The student should Know the thermal stress and thermal deformation connecting with simple stress. 5. The student should Know the analysis of Circular shaft which is suffered from torsional shear stress. 6. The student should Know how can find the Stresses and deformations in pressure vessels. 7. The student should Know the beams and loading types on them. Draw the Shear force and Bending Moment diagrams in beams. 8. The student should study the Study the stress induced in beams due to lateral loads and shear stress due to bending induced in beams. 9. The student should understand and be able to apply Equation of elastic curve using double integration method and using Macaulay's Method. 10. Enable the student to learn and understand Stresses at a Point and Complex Stresses and Graphical representation of stress at a point using Mohr's circle 11. Enable the student to learn and understand stress induced in

	relatively long Columns (Euler's Column Equation).
Indicative Contents	<p>Indicative content includes the following.</p> <p>Part A - Introduction to Simple Stresses, Strains: Study of simple stresses and strains. To know where the Hooke's law apply. And solved Statically Indeterminate Problems: [9 hrs].</p> <p>Thermal Strain and Stress: Study the strain and stress induced due to temperature changes. Solve statically indeterminate problems due to temperature changes [5 hrs].</p> <p>Part B - Torsion of Circular Shaft: Study the pure torsion for solid and hollow circular shafts. Study the stress induced due to torsion. Study the angular deformation induced due to torsion. [10 hrs].</p> <p>Part C- Pressure Vessels: Stresses and deformations in pressure vessels. [5 hrs].</p> <p>Part D- Beams: Introduction to beams and loading types. Draw the Shear force and Bending Moment diagrams in beams. [9 hrs]. Bending Stresses in Beams: Study the stress induced in beams due to lateral loads. Calculating the second moment of area. [5 hrs]. Shear Stress due to Bending in Beams: Study the shear stress due to bending induced in beams. [5 hrs]. Deflection in Beams: Equation of elastic curve using double integration method. Finding the elastic curve for complex loading using Macaulay's Method. [9 hrs].</p> <p>Stresses at a Point and Complex Stresses: Study the stresses at a point. Basic principles for calculating the combined stresses at a point. [5 hrs].</p> <p>Mohr's Circle: Graphical representation of stress at a point using Mohr's circle. Systematic procedure of graphical representation of stresses at a point using Mohr's circle. [5 hrs].</p> <p>Part E - Buckling of Columns:</p>

	Study the stress induced in relatively long Columns (Euler's Column Equation). Buckling for medium columns using Rankine method. [5 hrs].
Learning and Teaching Strategies	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

كلية الهندسة

Delivery Plan (Weekly Syllabus)	
	Material Covered
Week 1	Stresses, Strains, Hooke's Law: Study of simple stresses and strains, to know where the Hooke's law apply
Week 2	Statically Indeterminate Problems:

	Basic principles for solving statically indeterminate Problems.
Week 3	Thermal Strain and Stress: Study the strain and stress induced due to temperature changes. Solve statically indeterminate problems due to temperature changes
Week 4	Torsion of Circular Shaft: Study the angular deformation induced due to torsion.
Week 5	Torsion of Circular Shaft: Study the angular deformation induced due to torsion.
Week 6	Pressure Vessels: Stresses and deformations in pressure vessels.
Week 7	Beams: S.F. and B.M. Diagrams: Introduction to beams and loading types.
Week 8	Beams: S.F. and B.M. Diagrams: Draw the Shear force and Bending Moment diagrams in beams.
Week 9	Bending Stresses in Beams: Study the stress induced in beams due to lateral loads. Calculating the second moment of area.
Week 10	Shear Stress due to Bending in Beams: Study the shear stress due to bending induced in beams.
Week 11	Deflection in Beams: Equation of elastic curve using double integration method.
Week 12	Deflection in Beams: Finding the elastic curve for complex loading using Macaulay's Method.
Week 13	Stresses at a Point and Complex Stresses: Study the stresses at a point. Basic principles for calculating the combined stresses at a point.
Week 14	Mohr's Circle: Graphical representation of stress at a point using Mohr's circle. Systematic procedure of graphical representation of stresses at a point using Mohr's circle.
Week 15	Buckling of Columns: Study the stress induced in relatively long Columns (Euler's Column Equation). Buckling for medium columns using Rankine method.
Week 16	Final Exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Exp. 1: Tensile test
Week 2	Exp. 2: Torsion test

Week 3	Exp. 3: Thick pressure vessel
Week 4	Exp. 4: Bending test
Week 5	Exp. 5:
Week 6	Exp. 6:
Week 7	Exp. 7:

Review Committee Approval		26/09/2024	Version Number		2024

Relation With Other Modules			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			

Module Aims	<ol style="list-style-type: none"> 1. This course deals with the fundamentals of Thermodynamics including thermodynamic systems and properties, and relationships among the thermos-physical properties. 2. Description of the substance and phases including the theories dealing with the analytical formulation of their properties. 3. Description of the thermal system and its surroundings with interaction characteristics between them. 4. Awareness of units and dimensions in standard systems of units. 5. Definition of Energy and its forms, transformation means and tools. 6. Mathematical formulation of the First and Second laws of thermodynamics, their limitations and applications of these basic laws in thermodynamic systems. 7. Application of the physical and mathematical concepts to thermodynamic processes and evaluating their impacts on performance and developing techniques.
Module Learning Outcomes	<ol style="list-style-type: none"> 1. Identify fundamental concepts relevant to thermodynamics. 2. Students will know the definition of adiabatic, isobaric, isothermal and isometric processes. 3. Students will be familiar with the concept of a reversible engine and the Carnot cycle. 3. To understand and analyze the influence of fluid properties on the behaviour of engineering systems and to be able to analyze systems using the concepts of conservation of mass and energy. 4. Students will be able to find the maximum possible efficiency of heat engines and calculate the maximum coefficient of performance of a heat pump or refrigerator. 5. On successful completion of the module, students should be able to show experience and enhancement of discipline-specific practical skills in using appropriate modelling and analytical methods to solve thermodynamics problems. 6. To understand the thermodynamic behaviour of different fluids and their importance in a heat pump or a refrigerator. 7. An understanding of the everyday implications of the laws of thermodynamics and an ability to communicate these implications to a lay audience.
Indicative Contents	<p>Indicative content includes the following:</p> <p><u>Part A - Basic concepts</u></p> <p>- Systems of units & dimensions. Force, Pressure. Mass, volume, sp. volume & density.</p> <p>- Thermodynamic equilibrium. Conditions of equilibrium, Temperature and the Zeroth law of thermodynamics.</p>

Thermometers and Temperature scales. [4hrs]

- Energy:

Types of thermodynamic system.

Conventional and renewable sources of energy. Stored and transported energy. Internal energy. Potential and kinetic energy. Elastic energy (springs). [8hrs]

Heat energy and the Specific heat capacity. Work energy and Power.

Equivalent forms of work. Sign convention of heat & work. [8hrs]

- Properties of working substance:

Intensive & extensive properties. Single-phase system (Ideal gas), Equation of state for ideal gases, Real gas behavior. [4hrs]

Part B- First law of thermodynamics:

Conservation of energy principle, Statements of first law, Energy as system property, Non-flow energy equation, Practical applications of First law of thermodynamics. [4 hrs]

- Thermodynamic processes in closed system:

State function & path function. Constant volume process. Constant pressure process. Constant temperature process. Adiabatic & Polytropic process. [4hrs]

Flow systems:

Energy equation of flow systems. Steady & unsteady process. Boiler & condenser. Compressor & turbine. [8hrs]

Nozzle & diffuser. Throttling valves. [9hrs]

Reversible & irreversible process for flow systems (Friction, Temperature difference Free unrestrained expansion... etc.). [8hrs]

- Entropy:

Entropy & energy degradation, Entropy as system property.

Fundamental entropy equations. [8hrs]

Construction of (T – s) diagram for gases, Carnot cycle on (T – s) diagram.

General entropy equations for gases. [8hrs]

Entropy change in reversible processes. Entropy change in irreversible processes. [12hrs]

Part C- Second law of thermodynamics:

Relation between first & second laws, Statements of the second law.

Heat engine & thermal efficiency, Carnot power cycle, Work & efficiency in Carnot power cycle, Reversed heat engine & COP., Reversed Carnot cycle for cooling (Work and COP in Carnot cooling cycle). [12hrs]

Learning and Teaching Strategies

Strategies	<ul style="list-style-type: none"> Teaching Method 1 – Lectures (Description: Attendance Recorded: Yes) Teaching Method 2 – Tutorials (Description: Attendance Recorded: Yes) Teaching Method 3 – Practical (Description: Practical homework assignments. Attendance Recorded: No) Teaching Method 4 – Unscheduled Directed Student Hours (time spent away from the timetabled sessions but directed by the teaching staff). Teaching Method 5- Laboratory sessions(Providing experimental supplementary to promote the engineering sense of students)

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	<p>Definition of the second stage students in the Mechanical Engineering Department concepts of science thermodynamic.</p> <ol style="list-style-type: none"> 1. To develop rules for determining gas mixture properties from knowledge of mixture composition and the properties of the individual components. 2. To define the quantities used to describe the composition of a mixture such as mass fraction, molar fraction, and volume fraction. 3. To understand the concept of pure substance and phase; the process of steam generation and properties of steam; analysis the process of steam; determination of dryness fraction of wet steam and apply the accounts as well as the use of steam and steam schemes. 4. To perform analysis of thermodynamic steam and gas cycles (e.g., Carnot, Rankine, and Brayton cycles). 5. To perform psychrometric analysis for heating/cooling processes. 6. To explain the working and calculations of single and multi-stage reciprocating compressor; clearance volume; volumetric efficiency.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<ol style="list-style-type: none"> 1. Able to understand the concept of mole and mass fraction; partial pressure; Daltons law of partial pressure, and to setup the relation between partial pressure, mole fraction and volume fraction; the relations for gas constant, molecular mass, specific heats, and entropy of the gas mixture. 2. Able to use steam tables and charts as well as tables and charts cooling. Also, how to work the accounts of steam and use steam schemes. 3. Able to identify the components or parts of steam and gas stations . 4. Able to identify the application of the equations for the flow of energy to the stable parts of the plant steam. 5. Able to know the basic thermodynamic calculations on steam and gas cycles. 6. Able to perform psychrometric analysis for heating/cooling processes.

	7. Able to identify all parts of reciprocating air compressors and rotary as well as the accounts.
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p><u>Part A - Mixtures of gases</u> Physical mixing of pure substances, Avogadro's hypothesis, The mole and the molecular properties, Dalton's law of partial pressures Gibbs-Dalton law of apparent properties of mixture (u,h,s), Volumetric analysis, Gravimetric analysis, Average properties of mixture. [12hrs]</p> <p><u>Part B - Two-Phase system</u> Phase change process, Basic definitions, Property diagram and tables Fundamentals</p> <ul style="list-style-type: none"> - Processes on Two-Phase system: Constant volume process, Constant pressure process, Constant temperature process, Polytropic process, Isentropic process. [4hrs] - Steady flow devices: Boiler and Condenser, Nozzle and Diffuser, Turbine and Compressor, Mixing chamber. [4hrs] - Throttling: Throttling process, Measurement of steam quality, Separating and throttling calorimeters, Combined calorimeter. [5hrs] <p><u>Part C - Power production cycle by Vapour</u> Concept of heat engine and Criteria of cycle performance, Carnot cycle for a vapour. [4hrs] Simple Rankine steam power cycle, Deviation of actual Rankine steam power Cycle from Idealized One. [10hrs]</p> <p><u>Part D - Air standard cycles</u> Configuration of reciprocating engine, Air standard approximation, Carnot power cycle, Otto standard cycle, Diesel standard cycle, Dual (Mixed) standard cycle, Mean effective pressure, Simple gas turbine cycle (Joule-Brayton cycle), Deviation of actual gas-turbine cycle from idealized one. [14hrs]</p> <p><u>Part E - Psychrometrics:</u> Gas-vapour mixtures, Characteristics of humid air, Adiabatic saturation, Psychrometric chart. [7hrs]</p> <p><u>Part F - Reciprocating air compressors:</u> Description of reciprocating components, Indicated power input, Condition of minimum work and Isothermal efficiency, Effect of clearance volume and volumetric efficiency, Actual indicator diagram, Inter-cooling in multi-stage compressor, Steady flow analysis of a compressor. [14hrs]</p>

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	1-Preparing applied engineers in the field of engineering sciences who are distinguished by a high level of knowledge and technological creativity, in line with the strict standards adopted globally in quality assurance and academic accreditation of the corresponding engineering programs, while adhering to the ethics of the engineering profession. 2. Enable the student to know and understand work systems, risks, and the factors surrounding them. 3. Enable the student to know and understand theoretical principles in handicrafts and measurements.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- To familiarize the student with the vocabulary of occupational safety and its importance in the field of work. 2- Acquisition of the student's manual operation skills, for example (Filings and Tinsmith workshops), and mechanical operation skills, for example (Turning). 3- Acquisition of the student's mechanical forming skills, for example (Casting and Blacksmithing). 4- The student acquires basic engineering skills such as Welding, Carpentry, and Electrical installations that serve him in the professional field. 5- Enabling the student to operate the various machines and devices in mechanical operations and formation. 6- Cooperative learning by working collectively.
Indicative Contents المحتويات الإرشادية	1. Introducing the student to the basics of the art of turning and milling, types of cold working machines, the skill of dealing with them, choosing metals, operational tools, and methods of measurement and standardization 2. Introducing the student to the basics of the art of casting, hot forming, metal selection, method of working on casting furnaces and tools, and manufacturing casting molds 3. Familiarize students with the basics of cars and the systems they use, as well as maintenance, disassembly, and assembly processes. 4. Introducing students to the basics of household and industrial electrical appliances, the skill of using tools, and designing electrical circuits and control panels 5. Introducing the student to the basics of the art of plumbing, leveling surfaces, the skill of using tools, manufacturing and installing geometric shapes, and methods of measurement and standardization

	<p>6. Introducing the student to the basics of the art of blacksmithing, cold and hot forming of metals, the method of hardening them, and the skills of dealing with hand tools, forming machines, and heating furnaces</p> <p>7. Introducing the student to the basics of the art of filing and manual operation of metals with the help of manual, electrical, and mechanical tools, the skills of dealing with them, and the methods of measurement and standardization</p> <p>8. Introducing the student to the basics of the art of welding, the installation and assembly of metals, the types of welding machines, the skills of dealing with them, the types of welding, and the methods of measurement and standardization</p> <p>Introducing the student to the basics of the art of carpentry and woodworking with the help of manual, electrical, and mechanical tools, the skills of dealing with them, and methods of measurement and standardization</p>

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
	Material Covered
Week 1	Fitting workshop Occupational safety and its importance in filing workshops -An introduction to the basics of filing -Pen holder exercise “preparation and preparation”
Week 2	Fitting workshop Pencil holder exercises finishing and assembling.
Week 3	Fitting workshop -The catcher exercise. - Clamping exercise. Written exam in practical exercises.
Week 4	Carpentry workshop -Occupational safety and its importance in carpentry workshops. - An introduction to carpentry, its types, types of wood, tools used, and preparation Preparing the tools used Face modification exercise using the reindeer
Week 5	Carpentry workshop Garden fence work and how to connect its parts, the eight-star exercise
Week 6	Carpentry workshop - Wood smoothing exercise using smoothing paper - Wood dyeing exercise in three stages Final smoothing and varnishing exercise Written exam in practical exercises
Week 7	The tinsmith workshop Occupational safety and its importance in plumbing workshops An introduction to plumbing, its tools, and plumbing stages Planning and marking exercise on metal plates
Week 8	The tinsmith workshop Geometric shapes Types of individuals and methods of individuals Geometric shape individuals exercise on a metal board
Week 9	The tinsmith workshop Cone members exercise - Exercise of cylinders with an oblique cut Roll forming operations Connection without the use of an intermediary Written exam in practical exercises

Week 10	<p>Electric Workshop</p> <p>Occupational Safety and its importance in electrical workshops</p> <p>An introduction to the basics of electrical installations</p> <p>- Linking a simple circuit consisting of a lamp to the control of a single-way switch.</p> <p>Connect two lamps in series with one-way switch control.</p> <p>Connecting two lamps in parallel with the control of a single road switch.</p> <p>Connect two lights with one-way dual switch control.</p>
Week 11	<p>Electric Workshop</p> <p>Connect a fluorescent lamp circuit to a one-way switch control</p> <p>Connecting an electric supply socket circuit to the control of a separate or combined one-way switch</p> <p>Written exam in practical exercises</p>
Week 12	<p>Electric Workshop</p> <p>Occupational Safety and its importance in blacksmithing workshops</p> <p>Introduction to the basics of Blacksmithing</p> <p>- Barbell adjustment exercise</p> <p>Eight-star exercise</p> <p>- Exercise forming the number eight in English</p> <p>Exercise forming the number six in English</p>

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Welding workshop. -Occupational safety and its importance in welding workshops. -Introduction to the basics of welding. -Electric arc exercise. -An exercise for welding straight lines in a circular motion (helical).
Week 2	Welding workshop - An exercise for welding straight lines with a crescent movement and other welding methods -Construction welding exercise.
Week 3	Welding workshop. -Welding two pieces together. -Written exam in practical exercises.
Week 4	Casting workshop -Occupational safety and its importance in plumbing workshops. -Introduction to the basics of metal casting. -Simple wooden disc exercise. Half workout.
Week 5	Casting workshop Wheel exercise. Pushing arm exercise.
Week 6	Casting workshop. -Complete pulley exercise. -Circular pole exercise. -Written exam in practical exercises.
Week 7	Blacksmith Workshop -Occupational safety and its importance in blacksmithing workshops. -Introduction to the Basics of Blacksmithing. - Barbell adjustment exercise. -Eight-star exercise. - Exercise forming the number eight in English. -Six formation exercises in English.
Week 8	Blacksmith Workshop -An exercise forming the number five in English. - Exercise forming the number nine in English. -An exercise in forming an iron model in the form of a circle
Week 9	Blacksmith Workshop - S-shape exercise. - Air hammer hot barbell exercise. - Exercise to form a circle on an electric bending machine.

	- Exercising cold and hot ornament formation. .- A written exam in practical exercises
Week 10	Automotive Workshop -Occupational safety and its importance in car maintenance workshops. -An introduction to cars and their basic parts. -Parts of the engine, how it works, types of engines, and methods of classification.
Week 11	Automotive Workshop - Open the engine and identify the parts -Lubrication system -Cooling system.
Week 12	Automotive Workshop -The fuel system. -The old and new ignition circuits. -Written exam in practical exercises.
Week 13	Turning Workshop -Introduction to lathe machines and identifying their parts -Measuring tools and the use of an oven measuring instrument -Circular column lathing exercise on different diameters.
Week 14	Turning Workshop -Exercise using the pen (semicircular R) brackets. An exercise in making different angles using a pen (square + angle pen 55).
Week 15	Turning Workshop - Making shaft with different diameter exercises using (left and right pen) - Workout (Tube Connection). -Written exam in practical exercises.
Week 16	Final Exam

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Welding workshop. -Occupational safety and its importance in welding workshops. -Introduction to the basics of welding. -Electric arc exercise. -An exercise for welding straight lines in a circular motion (helical).
Week 2	Welding workshop - An exercise for welding straight lines with a crescent movement and other welding methods -Construction welding exercise.
Week 3	Welding workshop. -Welding two pieces together. -Written exam in practical exercises.
Week 4	Casting workshop -Occupational safety and its importance in plumbing workshops. -Introduction to the basics of metal casting. -Simple wooden disc exercise. Half workout.
Week 5	Casting workshop Wheel exercise. Pushing arm exercise.
Week 6	Casting workshop. -Complete pulley exercise. -Circular pole exercise. -Written exam in practical exercises.
Week 7	Blacksmith Workshop -Occupational safety and its importance in blacksmithing workshops. -Introduction to the Basics of Blacksmithing. - Barbell adjustment exercise. -Eight-star exercise. - Exercise forming the number eight in English. -Six formation exercises in English.
Week 8	Blacksmith Workshop -An exercise forming the number five in English. - Exercise forming the number nine in English. -An exercise in forming an iron model in the form of a circle
Week 9	Blacksmith Workshop - S-shape exercise. - Air hammer hot barbell exercise. - Exercise to form a circle on an electric bending machine.

	- Exercising cold and hot ornament formation. .- A written exam in practical exercises
Week 10	Automotive Workshop -Occupational safety and its importance in car maintenance workshops. -An introduction to cars and their basic parts. -Parts of the engine, how it works, types of engines, and methods of classification.
Week 11	Automotive Workshop - Open the engine and identify the parts -Lubrication system -Cooling system.
Week 12	Automotive Workshop -The fuel system. -The old and new ignition circuits. -Written exam in practical exercises.
Week 13	Turning Workshop -Introduction to lathe machines and identifying their parts -Measuring tools and the use of an oven measuring instrument -Circular column lathing exercise on different diameters.
Week 14	Turning Workshop -Exercise using the pen (semicircular R) brackets. An exercise in making different angles using a pen (square + angle pen 55).
Week 15	Turning Workshop - Making shaft with different diameter exercises using (left and right pen) - Workout (Tube Connection). -Written exam in practical exercises.
Week 16	Final Exam

APPENDIX:

GRADING SCHEME				
مخطط الدرجات				
Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	مقبول بقرار	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note:

NB Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
